

TUTORIA — FINAL CLIENT REVISION

CURRICULUM MASTER PACK

Ghana | Primary 4–6 | JHS 1–3 | SHS 1–3

ACTUAL CURRICULUM: Each unit now contains subject-specific knowledge and skills rather than only an AI teaching-flow instruction.

- INDEPENDENT GRADE CONTENT: Unit/topic scope has been rebuilt by grade. The document no longer repeats one generic ten-topic list across Primary, JHS and SHS. Topics are sequenced to reflect increasing knowledge, application and subject-specific progression.

- ❑ OFFICIAL CODES: Exact NaCCA Strand, Sub-strand, Content Standard, Indicator and Code must be transcribed from the current official subject curriculum. Source verification and SME sign-off are separate release gates; no generated code is presented as official.

PHASE ACCURACY: Upper Primary uses Our World and Our People; JHS uses the Common Core subject structure; SHS uses the Secondary Education curriculum family.

Official source basis

NaCCA's published curriculum materials are the authoritative basis for the mapping pass. The Upper Primary Mathematics source, for example, publishes coded content standards and indicators; B6 includes Content Standard B6.1.1.1 and indicator B6.1.1.1.6 for quantities and place value. [❑cite❑turnosearch3❑](#)

The Upper Primary English curriculum publishes a strand/sub-strand scope and sequence across B4–B6. [❑cite❑turnosearch2❑](#)

The Upper Primary Our World and Our People curriculum publishes grade-specific strands, standards and indicators; for example, B6.1.1.1 and B6.1.1.1.1 under Nature of God. [❑cite❑turnosearch5❑](#)

NaCCA's current curriculum catalogue and framework should be used to confirm the current version of each subject before final SME sign-off. [❑cite❑turnosearch0❑](#)

Subject coverage

Primary 4–6: Mathematics, English Language, Science, Our World and Our People, Computing.

JHS 1–3: Mathematics, English Language, Science, Social Studies, Computing.

SHS 1–3: Mathematics, English Language, Science, Social Studies, Computing.

TOPIC-SCOPE QA: Unit titles are grade-specific and are not a copy of the same topic list across all nine grades.
Detailed indicator wording/codes remain subject to official NaCCA source verification and SME sign-off.

Primary 4

Mathematics

Mathematics — Unit 1: Whole Numbers to 100,000 and Place Value

CURRICULUM CONTENT

Learners read, write, compose and decompose multi-digit whole numbers, identify the value of a digit by its place, compare and order numbers, and round numbers to a specified place. They use place-value charts and number lines and explain their reasoning.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for number and place value, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for number and place value: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 2: Addition and Subtraction within Large Numbers

CURRICULUM CONTENT

Learners add, subtract, multiply and divide whole numbers using appropriate written and mental strategies. They estimate before calculating, choose operations from word problems and check results with inverse operations or estimation.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for operations, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for operations: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 3: Multiplication, Division and Number Problems

CURRICULUM CONTENT

Learners represent common fractions with concrete materials, diagrams and number lines; identify equivalent fractions; compare simple fractions; and connect familiar fractions with decimal notation in money and measurement contexts.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for fractions and decimals, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for fractions and decimals: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 4: Fractions: Meaning, Equivalence and Comparison

CURRICULUM CONTENT

Learners interpret simple comparisons and fractions of quantities through sharing, classroom quantities and money. They recognise simple ratios and percentage ideas without treating percentage as a separate memorised procedure.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for ratio, proportion and percentages, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for ratio, proportion and percentages: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 5: Patterns, Number Sentences and Unknowns

CURRICULUM CONTENT

Learners continue and describe number patterns, identify a rule, use symbols for unknown quantities and explain the relationship between consecutive terms.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for algebra and patterns, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for algebra and patterns: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 6: Length, Mass, Capacity, Time and Money

CURRICULUM CONTENT

Learners measure and compare length, mass, capacity and time, select suitable units, estimate before measuring, and solve practical measurement problems.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for measurement, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for measurement: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 7: Lines, Angles and 2-D/3-D Shapes

CURRICULUM CONTENT

Learners identify and classify familiar two-dimensional and three-dimensional shapes, recognise lines and angles, investigate simple symmetry and use geometric vocabulary to describe properties.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for geometry, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for geometry: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 8: Perimeter, Area and Practical Measurement

CURRICULUM CONTENT

Learners collect familiar classroom data, organise it in tables and charts, read values accurately, compare categories and state conclusions supported by the data.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for graphs and statistics, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for graphs and statistics: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 9: Data Collection, Tables and Graphs

CURRICULUM CONTENT

Learners use the terms certain, likely, unlikely and impossible, compare simple chances and explain predictions from familiar games or experiments.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for probability, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for probability: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 10: Chance and Simple Problem Solving

CURRICULUM CONTENT

Learners identify relevant information, decide the sequence of operations, estimate, solve and check whether the final answer is sensible in context.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for multi-step problem solving, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for multi-step problem solving: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language

English Language — Unit 1: Songs, Rhymes and Oral Interaction

CURRICULUM CONTENT

This Primary 4 unit develops vocabulary and word meaning through short familiar texts, explicit meaning, basic inference, sentence accuracy and paragraph-level communication. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 4, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on vocabulary and word meaning; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on vocabulary and word meaning, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 2: Listening for Information and Instructions

CURRICULUM CONTENT

This Primary 4 unit develops oral language and listening through short familiar texts, explicit meaning, basic inference, sentence accuracy and paragraph-level communication. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 4, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on oral language and listening; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on oral language and listening, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 3: Reading Fluency and Literal Comprehension

CURRICULUM CONTENT

This Primary 4 unit develops reading comprehension through short familiar texts, explicit meaning, basic inference, sentence accuracy and paragraph-level communication. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 4, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on reading comprehension; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on reading comprehension, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 4: Main Ideas and Simple Inference

CURRICULUM CONTENT

This Primary 4 unit develops main ideas, inference and evidence through short familiar texts, explicit meaning, basic inference, sentence accuracy and paragraph-level communication. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 4, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on main ideas, inference and evidence; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on main ideas, inference and evidence, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 5: Nouns, Pronouns and Determiners

CURRICULUM CONTENT

This Primary 4 unit develops grammar and usage through short familiar texts, explicit meaning, basic inference, sentence accuracy and paragraph-level communication. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 4, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on grammar and usage; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on grammar and usage, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 6: Verbs, Adverbs and Prepositions

CURRICULUM CONTENT

This Primary 4 unit develops tense and agreement through short familiar texts, explicit meaning, basic inference, sentence accuracy and paragraph-level communication. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 4, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on tense and agreement; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on tense and agreement, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 7: Simple, Compound and Complex Sentences

CURRICULUM CONTENT

This Primary 4 unit develops sentence and paragraph structure through short familiar texts, explicit meaning, basic inference, sentence accuracy and paragraph-level communication. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 4, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on sentence and paragraph structure; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on sentence and paragraph structure, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 8: Guided Composition and Personal Writing

CURRICULUM CONTENT

This Primary 4 unit develops writing and composition through short familiar texts, explicit meaning, basic inference, sentence accuracy and paragraph-level communication. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 4, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on writing and composition; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on writing and composition, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 9: Letters and Everyday Functional Writing

CURRICULUM CONTENT

This Primary 4 unit develops reports, letters and formal communication through short familiar texts, explicit meaning, basic inference, sentence accuracy and paragraph-level communication. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 4, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on reports, letters and formal communication; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on reports, letters and formal communication, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 10: Spelling, Vocabulary and Extensive Reading

CURRICULUM CONTENT

This Primary 4 unit develops critical reading, editing and revision through short familiar texts, explicit meaning, basic inference, sentence accuracy and paragraph-level communication. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 4, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on critical reading, editing and revision; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on critical reading, editing and revision, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science

Science — Unit 1: Living and Non-Living Things

CURRICULUM CONTENT

This Primary 4 unit develops living things and classification through observation, classification, familiar examples and concrete evidence. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 4, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving living things and classification; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for living things and classification.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 2: Materials and Their Properties

CURRICULUM CONTENT

This Primary 4 unit develops matter and materials through observation, classification, familiar examples and concrete evidence. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 4, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving matter and materials; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for matter and materials.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 3: Earth Science and Our Planet

CURRICULUM CONTENT

This Primary 4 unit develops human health and nutrition through observation, classification, familiar examples and concrete evidence. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 4, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving human health and nutrition; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for human health and nutrition.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 4: Life Cycles of Organisms

CURRICULUM CONTENT

This Primary 4 unit develops plants, animals and life processes through observation, classification, familiar examples and concrete evidence. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 4, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving plants, animals and life processes; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for plants, animals and life processes.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 5: Human Body Systems

CURRICULUM CONTENT

This Primary 4 unit develops energy and energy transfer through observation, classification, familiar examples and concrete evidence. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 4, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving energy and energy transfer; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for energy and energy transfer.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 6: Sources and Forms of Energy

CURRICULUM CONTENT

This Primary 4 unit develops forces, motion and measurement through observation, classification, familiar examples and concrete evidence. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 4, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving forces, motion and measurement; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for forces, motion and measurement.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 7: Electricity and Simple Electronic Components

CURRICULUM CONTENT

This Primary 4 unit develops electricity, circuits and technology through observation, classification, familiar examples and concrete evidence. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 4, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving electricity, circuits and technology; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for electricity, circuits and technology.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 8: Forces and Movement

CURRICULUM CONTENT

This Primary 4 unit develops earth, environment and resources through observation, classification, familiar examples and concrete evidence. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 4, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving earth, environment and resources; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for earth, environment and resources.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 9: Personal Hygiene and Sanitation

CURRICULUM CONTENT

This Primary 4 unit develops scientific investigation and evidence through observation, classification, familiar examples and concrete evidence. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 4, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving scientific investigation and evidence; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for scientific investigation and evidence.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 10: Diseases, Climate and Environmental Responsibility

CURRICULUM CONTENT

This Primary 4 unit develops sustainability and responsible resource use through observation, classification, familiar examples and concrete evidence. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 4, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving sustainability and responsible resource use; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for sustainability and responsible resource use.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Our World and Our People

Our World and Our People — Unit 1: God, Creation and the Child

CURRICULUM CONTENT

This Primary 4 unit develops all about us: identity, family and community through identity, family, community, environment and responsible action. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 4, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving all about us: identity, family and community; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving all about us: identity, family and community, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Our World and Our People — Unit 2: The Family and Community

CURRICULUM CONTENT

This Primary 4 unit develops culture, values and traditions through identity, family, community, environment and responsible action. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 4, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving culture, values and traditions; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving culture, values and traditions, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Our World and Our People — Unit 3: Culture, Festivals and Values

CURRICULUM CONTENT

This Primary 4 unit develops our environment and natural resources through identity, family, community, environment and responsible action. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 4, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving our environment and natural resources; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving our environment and natural resources, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Our World and Our People — Unit 4: My School and Community Responsibilities

CURRICULUM CONTENT

This Primary 4 unit develops health, safety and wellbeing through identity, family, community, environment and responsible action. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 4, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving health, safety and wellbeing; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving health, safety and wellbeing, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Our World and Our People — Unit 5: Local Environment and Natural Resources

CURRICULUM CONTENT

This Primary 4 unit develops work, occupations and enterprise through identity, family, community, environment and responsible action. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 4, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving work, occupations and enterprise; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving work, occupations and enterprise, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Our World and Our People — Unit 6: Healthy Living and Safety

CURRICULUM CONTENT

This Primary 4 unit develops Ghanaian institutions and community services through identity, family, community, environment and responsible action. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 4, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving Ghanaian institutions and community services; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving Ghanaian institutions and community services, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Our World and Our People — Unit 7: Occupations and Community Services

CURRICULUM CONTENT

This Primary 4 unit develops citizenship and responsibilities through identity, family, community, environment and responsible action. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 4, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving citizenship and responsibilities; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving citizenship and responsibilities, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Our World and Our People — Unit 8: Transport and Communication

CURRICULUM CONTENT

This Primary 4 unit develops transport, communication and technology through identity, family, community, environment and responsible action. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 4, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving transport, communication and technology; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving transport, communication and technology, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Our World and Our People — Unit 9: Rules, Cooperation and Citizenship

CURRICULUM CONTENT

This Primary 4 unit develops community problem solving through identity, family, community, environment and responsible action. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 4, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving community problem solving; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving community problem solving, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Our World and Our People — Unit 10: Community Action and Reflection

CURRICULUM CONTENT

This Primary 4 unit develops action project and reflection through identity, family, community, environment and responsible action. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 4, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving action project and reflection; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving action project and reflection, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing

Computing — Unit 1: Digital devices and systems

CURRICULUM CONTENT

This Primary 4 unit develops digital devices and systems through device awareness, safe operation, simple data and guided digital production. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 4, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving digital devices and systems; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on digital devices and systems + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 2: Files, folders and digital organisation

CURRICULUM CONTENT

This Primary 4 unit develops files, folders and digital organisation through device awareness, safe operation, simple data and guided digital production. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 4, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving files, folders and digital organisation; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on files, folders and digital organisation + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 3: Word processing and digital documents

CURRICULUM CONTENT

This Primary 4 unit develops word processing and digital documents through device awareness, safe operation, simple data and guided digital production. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 4, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving word processing and digital documents; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on word processing and digital documents + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 4: Spreadsheets, formulas and data

CURRICULUM CONTENT

This Primary 4 unit develops spreadsheets, formulas and data through device awareness, safe operation, simple data and guided digital production. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 4, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving spreadsheets, formulas and data; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on spreadsheets, formulas and data + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 5: Presentations and multimedia

CURRICULUM CONTENT

This Primary 4 unit develops presentations and multimedia through device awareness, safe operation, simple data and guided digital production. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 4, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving presentations and multimedia; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on presentations and multimedia + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 6: Internet, networks and communication

CURRICULUM CONTENT

This Primary 4 unit develops internet, networks and communication through device awareness, safe operation, simple data and

guided digital production. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 4, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving internet, networks and communication; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on internet, networks and communication + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 7: Algorithms, programming and debugging

CURRICULUM CONTENT

This Primary 4 unit develops algorithms, programming and debugging through device awareness, safe operation, simple data and guided digital production. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 4, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving algorithms, programming and debugging; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on algorithms, programming and debugging + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 8: Data, information and representation

CURRICULUM CONTENT

This Primary 4 unit develops data, information and representation through device awareness, safe operation, simple data and guided digital production. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 4, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving data, information and representation; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on data, information and representation + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 9: Cyber safety, privacy and security

CURRICULUM CONTENT

This Primary 4 unit develops cyber safety, privacy and security through device awareness, safe operation, simple data and guided digital production. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 4, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving cyber safety, privacy and security; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on cyber safety, privacy and security + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 10: AI, ethics and digital projects

CURRICULUM CONTENT

This Primary 4 unit develops ai, ethics and digital projects through device awareness, safe operation, simple data and guided digital production. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 4, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving ai, ethics and digital projects; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on ai, ethics and digital projects + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 4; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Primary 5

Mathematics

Mathematics — Unit 1: Whole Numbers to 1,000,000 and Place Value

CURRICULUM CONTENT

Learners extend place-value understanding to larger numbers and decimal fractions. They compare, order and round decimals and explain equivalent representations such as 0.7 and 0.70 using place-value structure.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for number and place value, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for number and place value: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 2: Factors, Multiples and Divisibility

CURRICULUM CONTENT

Learners perform multi-digit operations accurately, solve two-step problems, estimate results and verify answers using an alternative method.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for operations, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for operations: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 3: Fractions and Decimal Representation

CURRICULUM CONTENT

Learners compare and operate with related fractions and decimals, use number lines and money contexts, and explain equivalence between representations.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for fractions and decimals, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for fractions and decimals: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 4: Operations with Fractions and Decimals

CURRICULUM CONTENT

Learners compare quantities using ratios, find simple equivalent ratios and calculate familiar percentages in prices, attendance and data contexts.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for ratio, proportion and percentages, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for ratio, proportion and percentages: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 5: Patterns, Functions and Unknowns

CURRICULUM CONTENT

Learners describe sequence rules, generate terms, represent unknowns and solve simple missing-number equations.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for algebra and patterns, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for algebra and patterns: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 6: Ratio, Rate and Percentage in Context

CURRICULUM CONTENT

Learners calculate perimeter and area of familiar shapes, work with time intervals, mass and capacity, and convert between familiar units.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for measurement, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for measurement: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 7: Measurement, Perimeter and Area

CURRICULUM CONTENT

Learners classify angles, triangles and quadrilaterals, investigate symmetry and use properties to justify classifications.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for geometry, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for geometry: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 8: Angles, Lines and Geometric Properties

CURRICULUM CONTENT

Learners construct and interpret tables, bar charts and line graphs, compare categories and identify trends.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for graphs and statistics, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for graphs and statistics: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 9: Data Collection, Interpretation and Representation

CURRICULUM CONTENT

Learners list possible outcomes, compare likelihoods and distinguish predicted probability from observed frequency.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for probability, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for probability: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 10: Chance and Multi-step Reasoning

CURRICULUM CONTENT

Learners combine number, fraction, measurement and data skills in two- and three-step situations and justify the selected method.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for multi-step problem solving, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for multi-step problem solving: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language

English Language — Unit 1: Conversation, Songs and Oral Presentation

CURRICULUM CONTENT

This Primary 5 unit develops vocabulary and word meaning through longer texts, richer vocabulary, evidence-based responses and paragraph organisation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 5, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on vocabulary and word meaning; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on vocabulary and word meaning, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 2: Listening Comprehension and Note-taking

CURRICULUM CONTENT

This Primary 5 unit develops oral language and listening through longer texts, richer vocabulary, evidence-based responses and paragraph organisation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 5, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on oral language and listening; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on oral language and listening, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 3: Reading for Main Ideas and Details

CURRICULUM CONTENT

This Primary 5 unit develops reading comprehension through longer texts, richer vocabulary, evidence-based responses and paragraph organisation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 5, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on reading comprehension; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on reading comprehension, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 4: Inference, Vocabulary and Text Evidence

CURRICULUM CONTENT

This Primary 5 unit develops main ideas, inference and evidence through longer texts, richer vocabulary, evidence-based responses and paragraph organisation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 5, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on main ideas, inference and evidence; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on main ideas, inference and evidence, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 5: Tense, Agreement and Sentence Functions

CURRICULUM CONTENT

This Primary 5 unit develops grammar and usage through longer texts, richer vocabulary, evidence-based responses and paragraph organisation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 5, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on grammar and usage; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on grammar and usage, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 6: Qualifying Words, Prepositions and Conjunctions

CURRICULUM CONTENT

This Primary 5 unit develops tense and agreement through longer texts, richer vocabulary, evidence-based responses and paragraph organisation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 5, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on tense and agreement; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on tense and agreement, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 7: Sentence Combining and Paragraph Development

CURRICULUM CONTENT

This Primary 5 unit develops sentence and paragraph structure through longer texts, richer vocabulary, evidence-based responses and paragraph organisation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 5, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on sentence and paragraph structure; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on sentence and paragraph structure, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 8: Narrative and Descriptive Composition

CURRICULUM CONTENT

This Primary 5 unit develops writing and composition through longer texts, richer vocabulary, evidence-based responses and paragraph organisation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 5, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on writing and composition; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on writing and composition, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 9: Informal and Formal Letters

CURRICULUM CONTENT

This Primary 5 unit develops reports, letters and formal communication through longer texts, richer vocabulary, evidence-based responses and paragraph organisation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 5, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on reports, letters and formal communication; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on reports, letters and formal communication, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 10: Editing, Spelling and Independent Reading

CURRICULUM CONTENT

This Primary 5 unit develops critical reading, editing and revision through longer texts, richer vocabulary, evidence-based responses and paragraph organisation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 5, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on critical reading, editing and revision; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on critical reading, editing and revision, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science

Science — Unit 1: Classification of Living Things

CURRICULUM CONTENT

This Primary 5 unit develops living things and classification through relationships, measurement, simple explanations and controlled observations. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 5, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving living things and classification; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for living things and classification.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 2: Materials and Changes in Materials

CURRICULUM CONTENT

This Primary 5 unit develops matter and materials through relationships, measurement, simple explanations and controlled observations. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 5, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving matter and materials; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for matter and materials.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 3: Earth, Weather and Environmental Processes

CURRICULUM CONTENT

This Primary 5 unit develops human health and nutrition through relationships, measurement, simple explanations and controlled observations. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 5, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving human health and nutrition; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for human health and nutrition.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 4: Life Cycles and Reproduction

CURRICULUM CONTENT

This Primary 5 unit develops plants, animals and life processes through relationships, measurement, simple explanations and controlled observations. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 5, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving plants, animals and life processes; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for plants, animals and life processes.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 5: Human Body Systems and Health

CURRICULUM CONTENT

This Primary 5 unit develops energy and energy transfer through relationships, measurement, simple explanations and controlled observations. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 5, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving energy and energy transfer; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for energy and energy transfer.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 6: Energy Sources and Energy Changes

CURRICULUM CONTENT

This Primary 5 unit develops forces, motion and measurement through relationships, measurement, simple explanations and controlled observations. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 5, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving forces, motion and measurement; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for forces, motion and measurement.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 7: Electricity, Circuits and Electronics

CURRICULUM CONTENT

This Primary 5 unit develops electricity, circuits and technology through relationships, measurement, simple explanations and controlled observations. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 5, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving electricity, circuits and technology; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for electricity, circuits and technology.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 8: Forces, Motion and Simple Machines

CURRICULUM CONTENT

This Primary 5 unit develops earth, environment and resources through relationships, measurement, simple explanations and controlled observations. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 5, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving earth, environment and resources; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for earth, environment and resources.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 9: Disease Prevention and Sanitation

CURRICULUM CONTENT

This Primary 5 unit develops scientific investigation and evidence through relationships, measurement, simple explanations and controlled observations. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 5, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving scientific investigation and evidence; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for scientific investigation and evidence.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 10: Science, Industry and Climate Change

CURRICULUM CONTENT

This Primary 5 unit develops sustainability and responsible resource use through relationships, measurement, simple explanations and controlled observations. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 5, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving sustainability and responsible resource use; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for sustainability and responsible resource use.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Our World and Our People

Our World and Our People — Unit 1: God and Creation in Our Community

CURRICULUM CONTENT

This Primary 5 unit develops all about us: identity, family and community through community systems, Ghanaian culture, resources, safety and social responsibility. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 5, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving all about us: identity, family and community; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving all about us: identity, family and community, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Our World and Our People — Unit 2: Family Roles and Social Relationships

CURRICULUM CONTENT

This Primary 5 unit develops culture, values and traditions through community systems, Ghanaian culture, resources, safety and social responsibility. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 5, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving culture, values and traditions; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving culture, values and traditions, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Our World and Our People — Unit 3: Ghanaian Culture and National Identity

CURRICULUM CONTENT

This Primary 5 unit develops our environment and natural resources through community systems, Ghanaian culture, resources, safety and social responsibility. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 5, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving our environment and natural resources; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving our environment and natural resources, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Our World and Our People — Unit 4: Community Leadership and Responsibilities

CURRICULUM CONTENT

This Primary 5 unit develops health, safety and wellbeing through community systems, Ghanaian culture, resources, safety and social responsibility. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 5, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving health, safety and wellbeing; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving health, safety and wellbeing, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Our World and Our People — Unit 5: Natural Resources and Environmental Care

CURRICULUM CONTENT

This Primary 5 unit develops work, occupations and enterprise through community systems, Ghanaian culture, resources, safety and social responsibility. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 5, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving work, occupations and enterprise; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving work, occupations and enterprise, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Our World and Our People — Unit 6: Health, Hygiene and Safety

CURRICULUM CONTENT

This Primary 5 unit develops Ghanaian institutions and community services through community systems, Ghanaian culture, resources, safety and social responsibility. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 5, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving Ghanaian institutions and community services; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving Ghanaian institutions and community services, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Our World and Our People — Unit 7: Work, Occupations and Enterprise

CURRICULUM CONTENT

This Primary 5 unit develops citizenship and responsibilities through community systems, Ghanaian culture, resources, safety and social responsibility. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 5, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving citizenship and responsibilities; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving citizenship and responsibilities, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Our World and Our People — Unit 8: Transport, Communication and Technology

CURRICULUM CONTENT

This Primary 5 unit develops transport, communication and technology through community systems, Ghanaian culture, resources, safety and social responsibility. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 5, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving transport, communication and technology; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving transport, communication and technology, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Our World and Our People — Unit 9: Rights, Duties and Good Citizenship

CURRICULUM CONTENT

This Primary 5 unit develops community problem solving through community systems, Ghanaian culture, resources, safety and social responsibility. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 5, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving community problem solving; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving community problem solving, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Our World and Our People — Unit 10: Solving Community Problems

CURRICULUM CONTENT

This Primary 5 unit develops action project and reflection through community systems, Ghanaian culture, resources, safety and social responsibility. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 5, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving action project and reflection; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving action project and reflection, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing

Computing — Unit 1: Digital devices and systems

CURRICULUM CONTENT

This Primary 5 unit develops digital devices and systems through independent productivity, structured data and introductory algorithmic thinking. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 5, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving digital devices and systems; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on digital devices and systems + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 2: Files, folders and digital organisation

CURRICULUM CONTENT

This Primary 5 unit develops files, folders and digital organisation through independent productivity, structured data and introductory algorithmic thinking. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 5, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving files, folders and digital organisation; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on files, folders and digital organisation + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 3: Word processing and digital documents

CURRICULUM CONTENT

This Primary 5 unit develops word processing and digital documents through independent productivity, structured data and introductory algorithmic thinking. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 5, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving word processing and digital documents; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on word processing and digital documents + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 4: Spreadsheets, formulas and data

CURRICULUM CONTENT

This Primary 5 unit develops spreadsheets, formulas and data through independent productivity, structured data and introductory algorithmic thinking. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 5, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving spreadsheets, formulas and data; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on spreadsheets, formulas and data + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 5: Presentations and multimedia

CURRICULUM CONTENT

This Primary 5 unit develops presentations and multimedia through independent productivity, structured data and introductory algorithmic thinking. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 5, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving presentations and multimedia; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on presentations and multimedia + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 6: Internet, networks and communication

CURRICULUM CONTENT

This Primary 5 unit develops internet, networks and communication through independent productivity, structured data and introductory algorithmic thinking. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 5, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving internet, networks and communication; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on internet, networks and communication + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 7: Algorithms, programming and debugging

CURRICULUM CONTENT

This Primary 5 unit develops algorithms, programming and debugging through independent productivity, structured data and introductory algorithmic thinking. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 5, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving algorithms, programming and debugging; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on algorithms, programming and debugging + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 8: Data, information and representation

CURRICULUM CONTENT

This Primary 5 unit develops data, information and representation through independent productivity, structured data and introductory algorithmic thinking. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 5, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving data, information and representation; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on data, information and representation + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 9: Cyber safety, privacy and security

CURRICULUM CONTENT

This Primary 5 unit develops cyber safety, privacy and security through independent productivity, structured data and introductory algorithmic thinking. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 5, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving cyber safety, privacy and security; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on cyber safety, privacy and security + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 10: AI, ethics and digital projects

CURRICULUM CONTENT

This Primary 5 unit develops ai, ethics and digital projects through independent productivity, structured data and introductory algorithmic thinking. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 5, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving ai, ethics and digital projects; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on ai, ethics and digital projects + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 5; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Primary 6

Mathematics

Mathematics — Unit 1: Whole Numbers to 1 Billion and Number Relationships

CURRICULUM CONTENT

Learners work with integers, factors, multiples and divisibility; use number lines; and explain numerical relationships in contexts such as temperature, elevation and repeated quantities.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for number and place value, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for number and place value: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 2: Integers, Factors and Multiples

CURRICULUM CONTENT

Learners apply mixed operations efficiently, use operation precedence where introduced, estimate and check results, and solve multi-stage problems.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for operations, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for operations: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 3: Fractions, Decimals and Percentages

CURRICULUM CONTENT

Learners operate with fractions and decimals, convert between representations, compare values and explain why different forms can be equivalent.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for fractions and decimals, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for fractions and decimals: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 4: Ratio, Proportion and Applied Percentages

CURRICULUM CONTENT

Learners solve proportional problems, use percentage increase or decrease in accessible contexts and compare rates using multiplicative reasoning.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for ratio, proportion and percentages, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for ratio, proportion and percentages: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 5: Patterns, Expressions and Unknowns

CURRICULUM CONTENT

Learners generalise sequences, express relationships with variables, solve simple equations and connect rules to outputs.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for algebra and patterns, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for algebra and patterns: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 6: Measurement, Area, Volume and Capacity

CURRICULUM CONTENT

Learners apply perimeter, area, volume and time concepts to practical problems and select appropriate units and formulae where introduced.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for measurement, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for measurement: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 7: Geometrical Reasoning and Position

CURRICULUM CONTENT

Learners reason about angles, triangles, quadrilaterals, symmetry and transformations using properties to justify results.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for geometry, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for geometry: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 8: Data Collection, Analysis and Interpretation

CURRICULUM CONTENT

Learners represent and interpret data, describe trends and support conclusions with evidence.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for graphs and statistics, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for graphs and statistics: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 9: Probability and Expected Outcomes

CURRICULUM CONTENT

Learners compare theoretical and experimental probability and explain possible outcomes.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for probability, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for probability: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 10: Integrated Mathematical Problem Solving

CURRICULUM CONTENT

Learners integrate several mathematical ideas in unfamiliar tasks, plan, justify, check and communicate solutions.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for multi-step problem solving, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for multi-step problem solving: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language

English Language — Unit 1: Oral Presentation, Discussion and Appropriate Register

CURRICULUM CONTENT

This Primary 6 unit develops vocabulary and word meaning through independent interpretation, inference, comparison of ideas and coherent extended writing. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 6, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on vocabulary and word meaning; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on vocabulary and word meaning, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 2: Listening for Key Ideas, Details and Purpose

CURRICULUM CONTENT

This Primary 6 unit develops oral language and listening through independent interpretation, inference, comparison of ideas and coherent extended writing. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context,

interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 6, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on oral language and listening; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on oral language and listening, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 3: Comprehension Across Fiction and Informational Texts

CURRICULUM CONTENT

This Primary 6 unit develops reading comprehension through independent interpretation, inference, comparison of ideas and coherent extended writing. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 6, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on reading comprehension; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on reading comprehension, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 4: Inference, Summary and Evidence

CURRICULUM CONTENT

This Primary 6 unit develops main ideas, inference and evidence through independent interpretation, inference, comparison of ideas and coherent extended writing. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 6, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on main ideas, inference and evidence; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on main ideas, inference and evidence, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 5: Grammar in Context and Sentence Accuracy

CURRICULUM CONTENT

This Primary 6 unit develops grammar and usage through independent interpretation, inference, comparison of ideas and coherent extended writing. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 6, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on grammar and usage; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on grammar and usage, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 6: Complex Sentences, Punctuation and Vocabulary

CURRICULUM CONTENT

This Primary 6 unit develops tense and agreement through independent interpretation, inference, comparison of ideas and coherent extended writing. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 6, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on tense and agreement; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on tense and agreement, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 7: Planning and Developing Extended Paragraphs

CURRICULUM CONTENT

This Primary 6 unit develops sentence and paragraph structure through independent interpretation, inference, comparison of ideas and coherent extended writing. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 6, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on sentence and paragraph structure; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on sentence and paragraph structure, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 8: Narrative, Expository and Persuasive Writing

CURRICULUM CONTENT

This Primary 6 unit develops writing and composition through independent interpretation, inference, comparison of ideas and coherent extended writing. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 6, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on writing and composition; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on writing and composition, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 9: Reports, Letters and Functional Communication

CURRICULUM CONTENT

This Primary 6 unit develops reports, letters and formal communication through independent interpretation, inference, comparison of ideas and coherent extended writing. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 6, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on reports, letters and formal communication; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on reports, letters and formal communication, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 10: Editing, Revision and Extensive Reading

CURRICULUM CONTENT

This Primary 6 unit develops critical reading, editing and revision through independent interpretation, inference, comparison of ideas and coherent extended writing. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 6, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on critical reading, editing and revision; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on critical reading, editing and revision, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science

Science — Unit 1: Characteristics and Interdependence of Living Things

CURRICULUM CONTENT

This Primary 6 unit develops living things and classification through cause-and-effect reasoning, simple investigations and more abstract models. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 6, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving living things and classification; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for living things and classification.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 2: Materials, Mixtures and Useful Properties

CURRICULUM CONTENT

This Primary 6 unit develops matter and materials through cause-and-effect reasoning, simple investigations and more abstract models. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 6, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving matter and materials; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for matter and materials.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 3: Earth Science, Weather and Environmental Change

CURRICULUM CONTENT

This Primary 6 unit develops human health and nutrition through cause-and-effect reasoning, simple investigations and more abstract models. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 6, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving human health and nutrition; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for human health and nutrition.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 4: Life Cycles and Adaptation

CURRICULUM CONTENT

This Primary 6 unit develops plants, animals and life processes through cause-and-effect reasoning, simple investigations and more abstract models. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 6, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving plants, animals and life processes; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for plants, animals and life processes.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 5: Human Body Systems and Healthy Living

CURRICULUM CONTENT

This Primary 6 unit develops energy and energy transfer through cause-and-effect reasoning, simple investigations and more abstract models. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 6, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving energy and energy transfer; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for energy and energy transfer.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 6: Energy Transformation and Conservation

CURRICULUM CONTENT

This Primary 6 unit develops forces, motion and measurement through cause-and-effect reasoning, simple investigations and more abstract models. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 6, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving forces, motion and measurement; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for forces, motion and measurement.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 7: Electrical Systems and Electronics

CURRICULUM CONTENT

This Primary 6 unit develops electricity, circuits and technology through cause-and-effect reasoning, simple investigations and more abstract models. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 6, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving electricity, circuits and technology; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for electricity, circuits and technology.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 8: Forces, Motion and Applications

CURRICULUM CONTENT

This Primary 6 unit develops earth, environment and resources through cause-and-effect reasoning, simple investigations and more abstract models. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 6, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving earth, environment and resources; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for earth, environment and resources.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 9: Science, Industry and Technology

CURRICULUM CONTENT

This Primary 6 unit develops scientific investigation and evidence through cause-and-effect reasoning, simple investigations and more abstract models. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 6, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving scientific investigation and evidence; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for scientific investigation and evidence.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 10: Climate Change, Health and Sustainability

CURRICULUM CONTENT

This Primary 6 unit develops sustainability and responsible resource use through cause-and-effect reasoning, simple investigations and more abstract models. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 6, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving sustainability and responsible resource use; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for sustainability and responsible resource use.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Our World and Our People

Our World and Our People — Unit 1: Nature of God and Moral Responsibility

CURRICULUM CONTENT

This Primary 6 unit develops all about us: identity, family and community through national identity, environmental stewardship, technology and citizenship. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 6, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving all about us: identity, family and community; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving all about us: identity, family and community, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Our World and Our People — Unit 2: Identity, Culture and Social Cohesion

CURRICULUM CONTENT

This Primary 6 unit develops culture, values and traditions through national identity, environmental stewardship, technology and citizenship. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 6, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving culture, values and traditions; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving culture, values and traditions, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Our World and Our People — Unit 3: Ghana's Communities and Institutions

CURRICULUM CONTENT

This Primary 6 unit develops our environment and natural resources through national identity, environmental stewardship, technology and citizenship. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 6, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving our environment and natural resources; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving our environment and natural resources, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Our World and Our People — Unit 4: Leadership, Rights and Responsibilities

CURRICULUM CONTENT

This Primary 6 unit develops health, safety and wellbeing through national identity, environmental stewardship, technology and citizenship. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 6, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving health, safety and wellbeing; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving health, safety and wellbeing, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Our World and Our People — Unit 5: Natural Resources and Sustainable Use

CURRICULUM CONTENT

This Primary 6 unit develops work, occupations and enterprise through national identity, environmental stewardship, technology and citizenship. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 6, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving work, occupations and enterprise; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving work, occupations and enterprise, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Our World and Our People — Unit 6: Health, Population and Wellbeing

CURRICULUM CONTENT

This Primary 6 unit develops Ghanaian institutions and community services through national identity, environmental stewardship, technology and citizenship. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 6, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving Ghanaian institutions and community services; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving Ghanaian institutions and community services, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Our World and Our People — Unit 7: Economic Activities and Local Development

CURRICULUM CONTENT

This Primary 6 unit develops citizenship and responsibilities through national identity, environmental stewardship, technology and citizenship. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 6, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving citizenship and responsibilities; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving citizenship and responsibilities, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Our World and Our People — Unit 8: Technology, Communication and Society

CURRICULUM CONTENT

This Primary 6 unit develops transport, communication and technology through national identity, environmental stewardship, technology and citizenship. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 6, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving transport, communication and technology; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving transport, communication and technology, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Our World and Our People — Unit 9: Citizenship and National Development

CURRICULUM CONTENT

This Primary 6 unit develops community problem solving through national identity, environmental stewardship, technology and citizenship. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 6, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving community problem solving; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving community problem solving, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Our World and Our People — Unit 10: Community Action, Project Work and Reflection

CURRICULUM CONTENT

This Primary 6 unit develops action project and reflection through national identity, environmental stewardship, technology and citizenship. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 6, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving action project and reflection; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving action project and reflection, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing

Computing — Unit 1: Digital devices and systems

CURRICULUM CONTENT

This Primary 6 unit develops digital devices and systems through problem decomposition, introductory programming and responsible digital practice. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 6, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving digital devices and systems; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on digital devices and systems + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 2: Files, folders and digital organisation

CURRICULUM CONTENT

This Primary 6 unit develops files, folders and digital organisation through problem decomposition, introductory programming

and responsible digital practice. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 6, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving files, folders and digital organisation; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on files, folders and digital organisation + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 3: Word processing and digital documents

CURRICULUM CONTENT

This Primary 6 unit develops word processing and digital documents through problem decomposition, introductory programming and responsible digital practice. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 6, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving word processing and digital documents; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on word processing and digital documents + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 4: Spreadsheets, formulas and data

CURRICULUM CONTENT

This Primary 6 unit develops spreadsheets, formulas and data through problem decomposition, introductory programming and responsible digital practice. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 6, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving spreadsheets, formulas and data; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on spreadsheets, formulas and data + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 5: Presentations and multimedia

CURRICULUM CONTENT

This Primary 6 unit develops presentations and multimedia through problem decomposition, introductory programming and responsible digital practice. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 6, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving presentations and multimedia; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on presentations and multimedia + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 6: Internet, networks and communication

CURRICULUM CONTENT

This Primary 6 unit develops internet, networks and communication through problem decomposition, introductory programming and responsible digital practice. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 6, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving internet, networks and communication; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on internet, networks and communication + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 7: Algorithms, programming and debugging

CURRICULUM CONTENT

This Primary 6 unit develops algorithms, programming and debugging through problem decomposition, introductory programming and responsible digital practice. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 6, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving algorithms, programming and debugging; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on algorithms, programming and debugging + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 8: Data, information and representation

CURRICULUM CONTENT

This Primary 6 unit develops data, information and representation through problem decomposition, introductory programming and responsible digital practice. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 6, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving data, information and representation; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on data, information and representation + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 9: Cyber safety, privacy and security

CURRICULUM CONTENT

This Primary 6 unit develops cyber safety, privacy and security through problem decomposition, introductory programming and responsible digital practice. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 6, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving cyber safety, privacy and security; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on cyber safety, privacy and security + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 10: AI, ethics and digital projects

CURRICULUM CONTENT

This Primary 6 unit develops ai, ethics and digital projects through problem decomposition, introductory programming and responsible digital practice. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for Primary 6, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving ai, ethics and digital projects; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on ai, ethics and digital projects + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for Primary 6; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

JHS 1

Phase: Common Core Programme

Mathematics

Mathematics — Unit 1: Number and Numeration Systems

CURRICULUM CONTENT

Formalise integers, rational numbers and index notation; compare signed and rational values and explain numerical relationships.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for number and place value, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for number and place value: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 2: Number Operations and Properties

CURRICULUM CONTENT

Apply integer and rational operations, estimate and verify results, and translate contextual problems into mathematical expressions.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for operations, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for operations: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 3: Fractions, Decimals and Percentages

CURRICULUM CONTENT

Connect fraction, decimal and percentage representations and operate with rational quantities in contextual problems.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for fractions and decimals, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for fractions and decimals: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 4: Ratios and Proportion

CURRICULUM CONTENT

Solve ratio, rate, proportion and percentage problems using tables, diagrams and equations.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for ratio, proportion and percentages, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for ratio, proportion and percentages: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 5: Patterns and Relationships

CURRICULUM CONTENT

Use variables, expressions, simple equations and sequences to generalise relationships.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for algebra and patterns, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for algebra and patterns: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 6: Algebraic Expressions

CURRICULUM CONTENT

Apply metric measurement, perimeter, area, volume and time relationships to practical problems.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for measurement, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for measurement: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 7: Variables and Equations

CURRICULUM CONTENT

Use angle and shape properties to classify, calculate and justify geometric results.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for geometry, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for geometry: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 8: Shapes and Space

CURRICULUM CONTENT

Collect, represent and interpret data and communicate conclusions supported by evidence.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for graphs and statistics, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for graphs and statistics: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 9: Measurement and Position

CURRICULUM CONTENT

Describe and calculate simple probabilities and interpret experimental outcomes.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for probability, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for probability: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 10: Data and Chance/Probability

CURRICULUM CONTENT

Select and combine mathematical methods to solve unfamiliar multi-stage problems.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for multi-step problem solving, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for multi-step problem solving: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language

English Language — Unit 1: Conversation and Everyday Discourse

CURRICULUM CONTENT

This JHS 1 unit develops vocabulary and word meaning through formal language analysis, structured evidence and controlled composition. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on vocabulary and word meaning; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on vocabulary and word meaning, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 2: Listening Comprehension and English Sounds

CURRICULUM CONTENT

This JHS 1 unit develops oral language and listening through formal language analysis, structured evidence and controlled composition. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on oral language and listening; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on oral language and listening, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 3: Reading Comprehension

CURRICULUM CONTENT

This JHS 1 unit develops reading comprehension through formal language analysis, structured evidence and controlled composition. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on reading comprehension; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on reading comprehension, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 4: Summarising and Vocabulary in Context

CURRICULUM CONTENT

This JHS 1 unit develops main ideas, inference and evidence through formal language analysis, structured evidence and controlled composition. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on main ideas, inference and evidence; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on main ideas, inference and evidence, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 5: Grammar and Grammar Usage

CURRICULUM CONTENT

This JHS 1 unit develops grammar and usage through formal language analysis, structured evidence and controlled composition. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on grammar and usage; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on grammar and usage, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 6: Punctuation, Capitalisation and Vocabulary

CURRICULUM CONTENT

This JHS 1 unit develops tense and agreement through formal language analysis, structured evidence and controlled composition. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on tense and agreement; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on tense and agreement, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 7: Writing Processes and Paragraph Development

CURRICULUM CONTENT

This JHS 1 unit develops sentence and paragraph structure through formal language analysis, structured evidence and controlled composition. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on sentence and paragraph structure; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on sentence and paragraph structure, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 8: Narrative, Descriptive and Expository Texts

CURRICULUM CONTENT

This JHS 1 unit develops writing and composition through formal language analysis, structured evidence and controlled composition. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on writing and composition; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on writing and composition, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 9: Functional Writing for Audience and Purpose

CURRICULUM CONTENT

This JHS 1 unit develops reports, letters and formal communication through formal language analysis, structured evidence and controlled composition. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on reports, letters and formal communication; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on reports, letters and formal communication, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 10: Literature: Narrative, Drama and Poetry

CURRICULUM CONTENT

This JHS 1 unit develops critical reading, editing and revision through formal language analysis, structured evidence and controlled composition. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on critical reading, editing and revision; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on critical reading, editing and revision, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science

Science — Unit 1: Living things and classification

CURRICULUM CONTENT

This JHS 1 unit develops living things and classification through scientific models, evidence-based explanations and practical investigation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving living things and classification; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for living things and classification.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 2: Matter and materials

CURRICULUM CONTENT

This JHS 1 unit develops matter and materials through scientific models, evidence-based explanations and practical investigation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving matter and materials; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for matter and materials.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 3: Human health and nutrition

CURRICULUM CONTENT

This JHS 1 unit develops human health and nutrition through scientific models, evidence-based explanations and practical investigation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving human health and nutrition; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for human health and nutrition.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 4: Plants, animals and life processes

CURRICULUM CONTENT

This JHS 1 unit develops plants, animals and life processes through scientific models, evidence-based explanations and practical investigation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving plants, animals and life processes; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for plants, animals and life processes.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 5: Energy and energy transfer

CURRICULUM CONTENT

This JHS 1 unit develops energy and energy transfer through scientific models, evidence-based explanations and practical investigation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving energy and energy transfer; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for energy and energy transfer.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 6: Forces, motion and measurement

CURRICULUM CONTENT

This JHS 1 unit develops forces, motion and measurement through scientific models, evidence-based explanations and practical investigation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving forces, motion and measurement; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for forces, motion and measurement.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 7: Electricity, circuits and technology

CURRICULUM CONTENT

This JHS 1 unit develops electricity, circuits and technology through scientific models, evidence-based explanations and practical investigation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving electricity, circuits and technology; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for electricity, circuits and technology.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 8: Earth, environment and resources

CURRICULUM CONTENT

This JHS 1 unit develops earth, environment and resources through scientific models, evidence-based explanations and practical investigation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving earth, environment and resources; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for earth, environment and resources.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 9: Scientific investigation and evidence

CURRICULUM CONTENT

This JHS 1 unit develops scientific investigation and evidence through scientific models, evidence-based explanations and practical investigation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving scientific investigation and evidence; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for scientific investigation and evidence.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 10: Sustainability and responsible resource use

CURRICULUM CONTENT

This JHS 1 unit develops sustainability and responsible resource use through scientific models, evidence-based explanations and practical investigation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving sustainability and responsible resource use; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for sustainability and responsible resource use.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies

Social Studies — Unit 1: Identity, Family and Socialisation

CURRICULUM CONTENT

This JHS 1 unit develops identity, culture and socialisation through self, family, community, environment and responsible citizenship. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving identity, culture and socialisation; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving identity, culture and socialisation, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 2: Culture and Ghanaian Society

CURRICULUM CONTENT

This JHS 1 unit develops family, community and social relationships through self, family, community, environment and responsible citizenship. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving family, community and social relationships; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving family, community and social relationships, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 3: The Environment and Natural Resources

CURRICULUM CONTENT

This JHS 1 unit develops environment and natural resources through self, family, community, environment and responsible citizenship. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving environment and natural resources; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving environment and natural resources, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 4: Population, Health and Wellbeing

CURRICULUM CONTENT

This JHS 1 unit develops population, health and wellbeing through self, family, community, environment and responsible citizenship. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving population, health and wellbeing; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving population, health and wellbeing, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 5: Economic Activities and Occupations

CURRICULUM CONTENT

This JHS 1 unit develops economic activities and development through self, family, community, environment and responsible citizenship. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving economic activities and development; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving economic activities and development, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 6: Governance and Community Institutions

CURRICULUM CONTENT

This JHS 1 unit develops governance and civic institutions through self, family, community, environment and responsible citizenship. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving governance and civic institutions; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving governance and civic institutions, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 7: Citizenship, Rights and Responsibilities

CURRICULUM CONTENT

This JHS 1 unit develops citizenship, rights and responsibilities through self, family, community, environment and responsible citizenship. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving citizenship, rights and responsibilities; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving citizenship, rights and responsibilities, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 8: Technology and Communication

CURRICULUM CONTENT

This JHS 1 unit develops technology, globalisation and society through self, family, community, environment and responsible citizenship. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving technology, globalisation and society; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving technology, globalisation and society, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 9: Community Development Problems

CURRICULUM CONTENT

This JHS 1 unit develops national development challenges through self, family, community, environment and responsible citizenship. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving national development challenges; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving national development challenges, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 10: Personal and Community Action

CURRICULUM CONTENT

This JHS 1 unit develops civic action and project work through self, family, community, environment and responsible citizenship. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving civic action and project work; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving civic action and project work, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing

Computing — Unit 1: Digital devices and systems

CURRICULUM CONTENT

This JHS 1 unit develops digital devices and systems through formal computational thinking, programming and digital citizenship. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving digital devices and systems; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on digital devices and systems + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 2: Files, folders and digital organisation

CURRICULUM CONTENT

This JHS 1 unit develops files, folders and digital organisation through formal computational thinking, programming and digital citizenship. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving files, folders and digital organisation; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on files, folders and digital organisation + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 3: Word processing and digital documents

CURRICULUM CONTENT

This JHS 1 unit develops word processing and digital documents through formal computational thinking, programming and digital citizenship. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving word processing and digital documents; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on word processing and digital documents + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 4: Spreadsheets, formulas and data

CURRICULUM CONTENT

This JHS 1 unit develops spreadsheets, formulas and data through formal computational thinking, programming and digital citizenship. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving spreadsheets, formulas and data; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on spreadsheets, formulas and data + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 5: Presentations and multimedia

CURRICULUM CONTENT

This JHS 1 unit develops presentations and multimedia through formal computational thinking, programming and digital citizenship. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving presentations and multimedia; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on presentations and multimedia + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 6: Internet, networks and communication

CURRICULUM CONTENT

This JHS 1 unit develops internet, networks and communication through formal computational thinking, programming and digital

citizenship. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving internet, networks and communication; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on internet, networks and communication + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 7: Algorithms, programming and debugging

CURRICULUM CONTENT

This JHS 1 unit develops algorithms, programming and debugging through formal computational thinking, programming and digital citizenship. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving algorithms, programming and debugging; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on algorithms, programming and debugging + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing – Unit 8: Data, information and representation

CURRICULUM CONTENT

This JHS 1 unit develops data, information and representation through formal computational thinking, programming and digital citizenship. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving data, information and representation; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on data, information and representation + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 9: Cyber safety, privacy and security

CURRICULUM CONTENT

This JHS 1 unit develops cyber safety, privacy and security through formal computational thinking, programming and digital citizenship. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving cyber safety, privacy and security; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on cyber safety, privacy and security + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 10: AI, ethics and digital projects

CURRICULUM CONTENT

This JHS 1 unit develops ai, ethics and digital projects through formal computational thinking, programming and digital citizenship. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving ai, ethics and digital projects; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on ai, ethics and digital projects + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

JHS 2

Phase: Common Core Programme

Mathematics

Mathematics — Unit 1: Rational Numbers and Number Relationships

CURRICULUM CONTENT

Analyse rational numbers, indices and numerical relationships using multiple representations and symbolic reasoning.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for number and place value, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for number and place value: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 2: Operations with Rational Numbers

CURRICULUM CONTENT

Combine numerical operations with algebraic and contextual reasoning and compare solution strategies.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for operations, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for operations: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 3: Fractions, Decimals and Percentages in Applications

CURRICULUM CONTENT

Transform and compare equivalent rational representations and use them in multi-step applications.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for fractions and decimals, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for fractions and decimals: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 4: Ratio, Rates and Proportion

CURRICULUM CONTENT

Apply proportional reasoning to rates, scale, finance and data situations.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for ratio, proportion and percentages, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for ratio, proportion and percentages: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 5: Sequences and Algebraic Relationships

CURRICULUM CONTENT

Transform expressions, solve equations and analyse rules and patterns.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for algebra and patterns, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for algebra and patterns: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 6: Algebraic Expressions and Simplification

CURRICULUM CONTENT

Solve compound measurement problems and justify the formula or unit selected.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for measurement, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for measurement: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 7: Linear Equations and Inequalities

CURRICULUM CONTENT

Apply angle, transformation, construction and shape reasoning to unfamiliar configurations.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for geometry, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for geometry: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 8: Geometric Properties and Constructions

CURRICULUM CONTENT

Interpret distributions and relationships in data and evaluate conclusions critically.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for graphs and statistics, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for graphs and statistics: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 9: Measurement, Transformation and Coordinates

CURRICULUM CONTENT

Compare theoretical and experimental probability in multi-step situations and identify assumptions.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for probability, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for probability: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 10: Data Analysis and Probability

CURRICULUM CONTENT

Combine several strands and explain why the selected method is valid.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for multi-step problem solving, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for multi-step problem solving: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language

English Language — Unit 1: Formal and Informal Oral Communication

CURRICULUM CONTENT

This JHS 2 unit develops vocabulary and word meaning through comparison of viewpoints, language-choice analysis and deliberate style. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on vocabulary and word meaning; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on vocabulary and word meaning, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 2: Listening for Meaning, Attitude and Detail

CURRICULUM CONTENT

This JHS 2 unit develops oral language and listening through comparison of viewpoints, language-choice analysis and deliberate style. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on oral language and listening; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on oral language and listening, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 3: Critical Reading and Comprehension

CURRICULUM CONTENT

This JHS 2 unit develops reading comprehension through comparison of viewpoints, language-choice analysis and deliberate style. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on reading comprehension; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on reading comprehension, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 4: Summarising, Inference and Evidence

CURRICULUM CONTENT

This JHS 2 unit develops main ideas, inference and evidence through comparison of viewpoints, language-choice analysis and deliberate style. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on main ideas, inference and evidence; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on main ideas, inference and evidence, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 5: Grammar and Sentence Structure

CURRICULUM CONTENT

This JHS 2 unit develops grammar and usage through comparison of viewpoints, language-choice analysis and deliberate style. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on grammar and usage; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on grammar and usage, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 6: Punctuation, Capitalisation and Word Choice

CURRICULUM CONTENT

This JHS 2 unit develops tense and agreement through comparison of viewpoints, language-choice analysis and deliberate style. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on tense and agreement; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on tense and agreement, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 7: Production and Distribution of Writing

CURRICULUM CONTENT

This JHS 2 unit develops sentence and paragraph structure through comparison of viewpoints, language-choice analysis and deliberate style. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on sentence and paragraph structure; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on sentence and paragraph structure, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 8: Text Types, Purposes and Organisation

CURRICULUM CONTENT

This JHS 2 unit develops writing and composition through comparison of viewpoints, language-choice analysis and deliberate style. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on writing and composition; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on writing and composition, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 9: Building and Presenting Knowledge

CURRICULUM CONTENT

This JHS 2 unit develops reports, letters and formal communication through comparison of viewpoints, language-choice analysis and deliberate style. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on reports, letters and formal communication; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on reports, letters and formal communication, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 10: Literature: Interpretation and Response

CURRICULUM CONTENT

This JHS 2 unit develops critical reading, editing and revision through comparison of viewpoints, language-choice analysis and deliberate style. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on critical reading, editing and revision; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on critical reading, editing and revision, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science

Science — Unit 1: Living things and classification

CURRICULUM CONTENT

This JHS 2 unit develops living things and classification through multi-variable reasoning, data interpretation and application. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving living things and classification; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for living things and classification.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 2: Matter and materials

CURRICULUM CONTENT

This JHS 2 unit develops matter and materials through multi-variable reasoning, data interpretation and application. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving matter and materials; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for matter and materials.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 3: Human health and nutrition

CURRICULUM CONTENT

This JHS 2 unit develops human health and nutrition through multi-variable reasoning, data interpretation and application. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving human health and nutrition; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for human health and nutrition.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 4: Plants, animals and life processes

CURRICULUM CONTENT

This JHS 2 unit develops plants, animals and life processes through multi-variable reasoning, data interpretation and application. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving plants, animals and life processes; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for plants, animals and life processes.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 5: Energy and energy transfer

CURRICULUM CONTENT

This JHS 2 unit develops energy and energy transfer through multi-variable reasoning, data interpretation and application. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving energy and energy transfer; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for energy and energy transfer.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 6: Forces, motion and measurement

CURRICULUM CONTENT

This JHS 2 unit develops forces, motion and measurement through multi-variable reasoning, data interpretation and application. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving forces, motion and measurement; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for forces, motion and measurement.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 7: Electricity, circuits and technology

CURRICULUM CONTENT

This JHS 2 unit develops electricity, circuits and technology through multi-variable reasoning, data interpretation and application. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving electricity, circuits and technology; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for electricity, circuits and technology.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 8: Earth, environment and resources

CURRICULUM CONTENT

This JHS 2 unit develops earth, environment and resources through multi-variable reasoning, data interpretation and application. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving earth, environment and resources; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for earth, environment and resources.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 9: Scientific investigation and evidence

CURRICULUM CONTENT

This JHS 2 unit develops scientific investigation and evidence through multi-variable reasoning, data interpretation and application. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving scientific investigation and evidence; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for scientific investigation and evidence.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 10: Sustainability and responsible resource use

CURRICULUM CONTENT

This JHS 2 unit develops sustainability and responsible resource use through multi-variable reasoning, data interpretation and application. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving sustainability and responsible resource use; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for sustainability and responsible resource use.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies

Social Studies — Unit 1: Social Structure and Relationships

CURRICULUM CONTENT

This JHS 2 unit develops identity, culture and socialisation through institutions, resources, culture, development and social relationships. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving identity, culture and socialisation; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving identity, culture and socialisation, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 2: Culture, Diversity and National Cohesion

CURRICULUM CONTENT

This JHS 2 unit develops family, community and social relationships through institutions, resources, culture, development and social relationships. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving family, community and social relationships; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving family, community and social relationships, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 3: Environmental Resources and Sustainability

CURRICULUM CONTENT

This JHS 2 unit develops environment and natural resources through institutions, resources, culture, development and social relationships. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving environment and natural resources; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving environment and natural resources, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 4: Population and Health Issues

CURRICULUM CONTENT

This JHS 2 unit develops population, health and wellbeing through institutions, resources, culture, development and social relationships. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving population, health and wellbeing; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving population, health and wellbeing, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 5: Production, Trade and Economic Development

CURRICULUM CONTENT

This JHS 2 unit develops economic activities and development through institutions, resources, culture, development and social relationships. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving economic activities and development; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving economic activities and development, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 6: Governance and Democratic Institutions

CURRICULUM CONTENT

This JHS 2 unit develops governance and civic institutions through institutions, resources, culture, development and social relationships. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving governance and civic institutions; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving governance and civic institutions, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 7: Civic Participation and National Values

CURRICULUM CONTENT

This JHS 2 unit develops citizenship, rights and responsibilities through institutions, resources, culture, development and social relationships. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving citizenship, rights and responsibilities; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving citizenship, rights and responsibilities, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 8: Technology, Globalisation and Society

CURRICULUM CONTENT

This JHS 2 unit develops technology, globalisation and society through institutions, resources, culture, development and social relationships. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving technology, globalisation and society; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving technology, globalisation and society, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 9: Development Challenges in Ghana

CURRICULUM CONTENT

This JHS 2 unit develops national development challenges through institutions, resources, culture, development and social relationships. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving national development challenges; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving national development challenges, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 10: Community Research and Project Work

CURRICULUM CONTENT

This JHS 2 unit develops civic action and project work through institutions, resources, culture, development and social relationships. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving civic action and project work; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving civic action and project work, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing

Computing — Unit 1: Digital devices and systems

CURRICULUM CONTENT

This JHS 2 unit develops digital devices and systems through debugging, data handling, networks and security. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving digital devices and systems; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on digital devices and systems + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 2: Files, folders and digital organisation

CURRICULUM CONTENT

This JHS 2 unit develops files, folders and digital organisation through debugging, data handling, networks and security. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving files, folders and digital organisation; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on files, folders and digital organisation + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 3: Word processing and digital documents

CURRICULUM CONTENT

This JHS 2 unit develops word processing and digital documents through debugging, data handling, networks and security. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving word processing and digital documents; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on word processing and digital documents + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 4: Spreadsheets, formulas and data

CURRICULUM CONTENT

This JHS 2 unit develops spreadsheets, formulas and data through debugging, data handling, networks and security. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving spreadsheets, formulas and data; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on spreadsheets, formulas and data + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 5: Presentations and multimedia

CURRICULUM CONTENT

This JHS 2 unit develops presentations and multimedia through debugging, data handling, networks and security. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving presentations and multimedia; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on presentations and multimedia + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 6: Internet, networks and communication

CURRICULUM CONTENT

This JHS 2 unit develops internet, networks and communication through debugging, data handling, networks and security. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving internet, networks and communication; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on internet, networks and communication + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 7: Algorithms, programming and debugging

CURRICULUM CONTENT

This JHS 2 unit develops algorithms, programming and debugging through debugging, data handling, networks and security. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving algorithms, programming and debugging; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on algorithms, programming and debugging + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 8: Data, information and representation

CURRICULUM CONTENT

This JHS 2 unit develops data, information and representation through debugging, data handling, networks and security. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving data, information and representation; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on data, information and representation + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 9: Cyber safety, privacy and security

CURRICULUM CONTENT

This JHS 2 unit develops cyber safety, privacy and security through debugging, data handling, networks and security. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving cyber safety, privacy and security; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on cyber safety, privacy and security + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 10: AI, ethics and digital projects

CURRICULUM CONTENT

This JHS 2 unit develops ai, ethics and digital projects through debugging, data handling, networks and security. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving ai, ethics and digital projects; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on ai, ethics and digital projects + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

JHS 3

Phase: Common Core Programme

Mathematics

Mathematics — Unit 1: Number Systems and Numerical Reasoning

CURRICULUM CONTENT

Integrate number-system knowledge in unfamiliar and examination-style reasoning, including rational and index relationships.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for number and place value, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for number and place value: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 2: Indices, Standard Form and Number Operations

CURRICULUM CONTENT

Select efficient methods for complex numerical and algebraic calculations and verify results.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for operations, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for operations: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 3: Percentage, Ratio and Proportion Problems

CURRICULUM CONTENT

Integrate rational-number representations into multi-step applications and justify transformations.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for fractions and decimals, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for fractions and decimals: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 4: Algebraic Patterns and Relationships

CURRICULUM CONTENT

Model rates, percentage change and proportional relationships and interpret results.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for ratio, proportion and percentages, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for ratio, proportion and percentages: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 5: Expressions and Factorisation

CURRICULUM CONTENT

Generalise relationships, solve equations and justify algebraic transformations.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for algebra and patterns, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for algebra and patterns: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 6: Linear Equations and Inequalities

CURRICULUM CONTENT

Apply measurement formulae and geometric relationships to unfamiliar contexts.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for measurement, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for measurement: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 7: Shapes, Space and Geometric Reasoning

CURRICULUM CONTENT

Construct arguments using geometric properties and relationships and communicate a complete solution.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for geometry, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for geometry: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 8: Measurement and Position/Transformation

CURRICULUM CONTENT

Analyse data representations and communicate evidence-based conclusions.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for graphs and statistics, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for graphs and statistics: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 9: Data Handling and Interpretation

CURRICULUM CONTENT

Solve probability problems and evaluate claims about chance.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for probability, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for probability: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 10: Probability and Examination Problem Solving

CURRICULUM CONTENT

Integrate mathematical strands, verify results and communicate complete solutions.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for multi-step problem solving, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for multi-step problem solving: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language

English Language — Unit 1: Effective Oral Communication and Presentation

CURRICULUM CONTENT

This JHS 3 unit develops vocabulary and word meaning through integrated reading, analysis and examination-oriented writing. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on vocabulary and word meaning; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on vocabulary and word meaning, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 2: Listening Critically to Spoken Texts

CURRICULUM CONTENT

This JHS 3 unit develops oral language and listening through integrated reading, analysis and examination-oriented writing. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on oral language and listening; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on oral language and listening, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 3: Reading for Analysis and Evaluation

CURRICULUM CONTENT

This JHS 3 unit develops reading comprehension through integrated reading, analysis and examination-oriented writing. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on reading comprehension; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on reading comprehension, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 4: Summary, Inference and Critical Response

CURRICULUM CONTENT

This JHS 3 unit develops main ideas, inference and evidence through integrated reading, analysis and examination-oriented writing. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on main ideas, inference and evidence; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on main ideas, inference and evidence, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 5: Advanced Grammar and Usage

CURRICULUM CONTENT

This JHS 3 unit develops grammar and usage through integrated reading, analysis and examination-oriented writing. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on grammar and usage; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on grammar and usage, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 6: Vocabulary, Punctuation and Editing

CURRICULUM CONTENT

This JHS 3 unit develops tense and agreement through integrated reading, analysis and examination-oriented writing. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on tense and agreement; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on tense and agreement, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 7: Writing for Audience, Purpose and Form

CURRICULUM CONTENT

This JHS 3 unit develops sentence and paragraph structure through integrated reading, analysis and examination-oriented writing. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on sentence and paragraph structure; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on sentence and paragraph structure, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 8: Argumentative, Expository and Functional Writing

CURRICULUM CONTENT

This JHS 3 unit develops writing and composition through integrated reading, analysis and examination-oriented writing. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on writing and composition; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on writing and composition, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 9: Research, Synthesis and Presentation

CURRICULUM CONTENT

This JHS 3 unit develops reports, letters and formal communication through integrated reading, analysis and examination-oriented writing. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or

produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on reports, letters and formal communication; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on reports, letters and formal communication, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 10: Literature: Comparative Response to Texts

CURRICULUM CONTENT

This JHS 3 unit develops critical reading, editing and revision through integrated reading, analysis and examination-oriented writing. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on critical reading, editing and revision; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on critical reading, editing and revision, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science

Science — Unit 1: Living things and classification

CURRICULUM CONTENT

This JHS 3 unit develops living things and classification through integrated scientific reasoning, experimental design and evaluation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving living things and classification; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for living things and classification.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 2: Matter and materials

CURRICULUM CONTENT

This JHS 3 unit develops matter and materials through integrated scientific reasoning, experimental design and evaluation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving matter and materials; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for matter and materials.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 3: Human health and nutrition

CURRICULUM CONTENT

This JHS 3 unit develops human health and nutrition through integrated scientific reasoning, experimental design and evaluation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving human health and nutrition; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for human health and nutrition.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 4: Plants, animals and life processes

CURRICULUM CONTENT

This JHS 3 unit develops plants, animals and life processes through integrated scientific reasoning, experimental design and evaluation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving plants, animals and life processes; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for plants, animals and life processes.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 5: Energy and energy transfer

CURRICULUM CONTENT

This JHS 3 unit develops energy and energy transfer through integrated scientific reasoning, experimental design and evaluation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving energy and energy transfer; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for energy and energy transfer.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 6: Forces, motion and measurement

CURRICULUM CONTENT

This JHS 3 unit develops forces, motion and measurement through integrated scientific reasoning, experimental design and evaluation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving forces, motion and measurement; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for forces, motion and measurement.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 7: Electricity, circuits and technology

CURRICULUM CONTENT

This JHS 3 unit develops electricity, circuits and technology through integrated scientific reasoning, experimental design and evaluation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving electricity, circuits and technology; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for electricity, circuits and technology.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 8: Earth, environment and resources

CURRICULUM CONTENT

This JHS 3 unit develops earth, environment and resources through integrated scientific reasoning, experimental design and evaluation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving earth, environment and resources; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for earth, environment and resources.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 9: Scientific investigation and evidence

CURRICULUM CONTENT

This JHS 3 unit develops scientific investigation and evidence through integrated scientific reasoning, experimental design and evaluation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving scientific investigation and evidence; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for scientific investigation and evidence.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 10: Sustainability and responsible resource use

CURRICULUM CONTENT

This JHS 3 unit develops sustainability and responsible resource use through integrated scientific reasoning, experimental design and evaluation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving sustainability and responsible resource use; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for sustainability and responsible resource use.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies

Social Studies — Unit 1: Identity, Social Change and National Cohesion

CURRICULUM CONTENT

This JHS 3 unit develops identity, culture and socialisation through governance, national development, global issues and civic reasoning. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving identity, culture and socialisation; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving identity, culture and socialisation, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 2: Culture, Heritage and Global Interaction

CURRICULUM CONTENT

This JHS 3 unit develops family, community and social relationships through governance, national development, global issues and civic reasoning. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving family, community and social relationships; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving family, community and social relationships, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 3: Environmental Management and Climate Issues

CURRICULUM CONTENT

This JHS 3 unit develops environment and natural resources through governance, national development, global issues and civic reasoning. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving environment and natural resources; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving environment and natural resources, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 4: Population, Health and Development

CURRICULUM CONTENT

This JHS 3 unit develops population, health and wellbeing through governance, national development, global issues and civic reasoning. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving population, health and wellbeing; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving population, health and wellbeing, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 5: Economic Development and Entrepreneurship

CURRICULUM CONTENT

This JHS 3 unit develops economic activities and development through governance, national development, global issues and civic reasoning. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving economic activities and development; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving economic activities and development, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 6: Governance, Democracy and Accountability

CURRICULUM CONTENT

This JHS 3 unit develops governance and civic institutions through governance, national development, global issues and civic reasoning. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving governance and civic institutions; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving governance and civic institutions, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 7: Rights, Duties and Responsible Citizenship

CURRICULUM CONTENT

This JHS 3 unit develops citizenship, rights and responsibilities through governance, national development, global issues and civic reasoning. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving citizenship, rights and responsibilities; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving citizenship, rights and responsibilities, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 8: Globalisation, Technology and Inequality

CURRICULUM CONTENT

This JHS 3 unit develops technology, globalisation and society through governance, national development, global issues and civic reasoning. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving technology, globalisation and society; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving technology, globalisation and society, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 9: National Development Challenges

CURRICULUM CONTENT

This JHS 3 unit develops national development challenges through governance, national development, global issues and civic reasoning. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving national development challenges; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving national development challenges, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 10: Civic Action, Research and Reflection

CURRICULUM CONTENT

This JHS 3 unit develops civic action and project work through governance, national development, global issues and civic reasoning. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving civic action and project work; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving civic action and project work, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing

Computing — Unit 1: Digital devices and systems

CURRICULUM CONTENT

This JHS 3 unit develops digital devices and systems through integrated computational projects, security and evaluation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving digital devices and systems; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on digital devices and systems + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 2: Files, folders and digital organisation

CURRICULUM CONTENT

This JHS 3 unit develops files, folders and digital organisation through integrated computational projects, security and evaluation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving files, folders and digital organisation; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on files, folders and digital organisation + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 3: Word processing and digital documents

CURRICULUM CONTENT

This JHS 3 unit develops word processing and digital documents through integrated computational projects, security and evaluation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving word processing and digital documents; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on word processing and digital documents + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 4: Spreadsheets, formulas and data

CURRICULUM CONTENT

This JHS 3 unit develops spreadsheets, formulas and data through integrated computational projects, security and evaluation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving spreadsheets, formulas and data; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on spreadsheets, formulas and data + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 5: Presentations and multimedia

CURRICULUM CONTENT

This JHS 3 unit develops presentations and multimedia through integrated computational projects, security and evaluation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving presentations and multimedia; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on presentations and multimedia + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 6: Internet, networks and communication

CURRICULUM CONTENT

This JHS 3 unit develops internet, networks and communication through integrated computational projects, security and evaluation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving internet, networks and communication; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on internet, networks and communication + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 7: Algorithms, programming and debugging

CURRICULUM CONTENT

This JHS 3 unit develops algorithms, programming and debugging through integrated computational projects, security and evaluation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving algorithms, programming and debugging; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on algorithms, programming and debugging + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 8: Data, information and representation

CURRICULUM CONTENT

This JHS 3 unit develops data, information and representation through integrated computational projects, security and evaluation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving data, information and representation; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on data, information and representation + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 9: Cyber safety, privacy and security

CURRICULUM CONTENT

This JHS 3 unit develops cyber safety, privacy and security through integrated computational projects, security and evaluation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving cyber safety, privacy and security; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on cyber safety, privacy and security + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 10: AI, ethics and digital projects

CURRICULUM CONTENT

This JHS 3 unit develops ai, ethics and digital projects through integrated computational projects, security and evaluation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for JHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving ai, ethics and digital projects; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on ai, ethics and digital projects + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for JHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

SHS 1

Phase: Secondary Education

Mathematics

Mathematics — Unit 1: Sets, Number Systems and Real Numbers

CURRICULUM CONTENT

Formalise real-number properties and index relationships and connect numerical structure to algebraic reasoning.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for number and place value, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for number and place value: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 2: Indices, Surds and Logarithmic Foundations

CURRICULUM CONTENT

Use numerical and algebraic operations with precision and verify transformations.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for operations, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for operations: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 3: Algebraic Expressions and Factorisation

CURRICULUM CONTENT

Connect rational-number structure to algebraic manipulation and modelling.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for fractions and decimals, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for fractions and decimals: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 4: Equations, Inequalities and Functions

CURRICULUM CONTENT

Model proportional relationships, rates and percentage change.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for ratio, proportion and percentages, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for ratio, proportion and percentages: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 5: Sequences, Series and Mathematical Patterns

CURRICULUM CONTENT

Develop algebraic models and generalisations from patterns and relationships.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for algebra and patterns, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for algebra and patterns: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 6: Coordinate Geometry and Straight Lines

CURRICULUM CONTENT

Apply measurement and geometric formulae to mathematical modelling.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for measurement, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for measurement: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 7: Geometry, Measurement and Trigonometric Foundations

CURRICULUM CONTENT

Reason with formal geometric properties and spatial relationships.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for geometry, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for geometry: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 8: Statistics and Data Representation

CURRICULUM CONTENT

Analyse and interpret quantitative information and communicate evidence.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for graphs and statistics, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for graphs and statistics: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 9: Probability and Counting Ideas

CURRICULUM CONTENT

Model uncertainty and interpret probability in real contexts.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for probability, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for probability: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 10: Mathematical Modelling and Applications

CURRICULUM CONTENT

Select and defend methods in multi-concept mathematical problems.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for multi-step problem solving, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for multi-step problem solving: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language

English Language — Unit 1: Oral Communication and Formal Discourse

CURRICULUM CONTENT

This SHS 1 unit develops vocabulary and word meaning through formal analysis, synthesis, audience and purpose control. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on vocabulary and word meaning; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on vocabulary and word meaning, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 2: Listening, Note-taking and Spoken Texts

CURRICULUM CONTENT

This SHS 1 unit develops oral language and listening through formal analysis, synthesis, audience and purpose control. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on oral language and listening; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on oral language and listening, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 3: Reading Strategies and Text Analysis

CURRICULUM CONTENT

This SHS 1 unit develops reading comprehension through formal analysis, synthesis, audience and purpose control. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on reading comprehension; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on reading comprehension, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 4: Vocabulary, Meaning and Critical Response

CURRICULUM CONTENT

This SHS 1 unit develops main ideas, inference and evidence through formal analysis, synthesis, audience and purpose control. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on main ideas, inference and evidence; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on main ideas, inference and evidence, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 5: Grammar, Usage and Sentence Control

CURRICULUM CONTENT

This SHS 1 unit develops grammar and usage through formal analysis, synthesis, audience and purpose control. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on grammar and usage; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on grammar and usage, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 6: Writing Processes and Organisation

CURRICULUM CONTENT

This SHS 1 unit develops tense and agreement through formal analysis, synthesis, audience and purpose control. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on tense and agreement; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on tense and agreement, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 7: Expository, Narrative and Descriptive Writing

CURRICULUM CONTENT

This SHS 1 unit develops sentence and paragraph structure through formal analysis, synthesis, audience and purpose control. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on sentence and paragraph structure; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on sentence and paragraph structure, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 8: Argumentative and Persuasive Writing

CURRICULUM CONTENT

This SHS 1 unit develops writing and composition through formal analysis, synthesis, audience and purpose control. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on writing and composition; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on writing and composition, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 9: Functional and Academic Communication

CURRICULUM CONTENT

This SHS 1 unit develops reports, letters and formal communication through formal analysis, synthesis, audience and purpose control. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on reports, letters and formal communication; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on reports, letters and formal communication, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 10: Literature: Prose, Poetry and Drama

CURRICULUM CONTENT

This SHS 1 unit develops critical reading, editing and revision through formal analysis, synthesis, audience and purpose control. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on critical reading, editing and revision; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on critical reading, editing and revision, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science

Science — Unit 1: Scientific Measurement and Laboratory Practice

CURRICULUM CONTENT

This SHS 1 unit develops living things and classification through formal models, quantitative relationships and structured investigation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving living things and classification; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for living things and classification.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 2: Matter, Particles and Chemical Change

CURRICULUM CONTENT

This SHS 1 unit develops matter and materials through formal models, quantitative relationships and structured investigation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving matter and materials; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for matter and materials.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 3: Energy, Work and Power

CURRICULUM CONTENT

This SHS 1 unit develops human health and nutrition through formal models, quantitative relationships and structured investigation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving human health and nutrition; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for human health and nutrition.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 4: Motion, Forces and Simple Systems

CURRICULUM CONTENT

This SHS 1 unit develops plants, animals and life processes through formal models, quantitative relationships and structured investigation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving plants, animals and life processes; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for plants, animals and life processes.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 5: Waves, Sound and Light

CURRICULUM CONTENT

This SHS 1 unit develops energy and energy transfer through formal models, quantitative relationships and structured investigation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving energy and energy transfer; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for energy and energy transfer.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 6: Electricity and Basic Circuits

CURRICULUM CONTENT

This SHS 1 unit develops forces, motion and measurement through formal models, quantitative relationships and structured investigation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving forces, motion and measurement; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for forces, motion and measurement.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 7: Earth, Atmosphere and Environmental Systems

CURRICULUM CONTENT

This SHS 1 unit develops electricity, circuits and technology through formal models, quantitative relationships and structured investigation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving electricity, circuits and technology; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for electricity, circuits and technology.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 8: Cells, Organisms and Life Processes

CURRICULUM CONTENT

This SHS 1 unit develops earth, environment and resources through formal models, quantitative relationships and structured investigation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving earth, environment and resources; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for earth, environment and resources.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 9: Health, Disease and Human Systems

CURRICULUM CONTENT

This SHS 1 unit develops scientific investigation and evidence through formal models, quantitative relationships and structured investigation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving scientific investigation and evidence; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for scientific investigation and evidence.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 10: Scientific Investigation and Data Analysis

CURRICULUM CONTENT

This SHS 1 unit develops sustainability and responsible resource use through formal models, quantitative relationships and structured investigation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving sustainability and responsible resource use; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for sustainability and responsible resource use.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies

Social Studies — Unit 1: Identity, Culture and Socialisation

CURRICULUM CONTENT

This SHS 1 unit develops identity, culture and socialisation through social systems, institutions and development analysis. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving identity, culture and socialisation; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving identity, culture and socialisation, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 2: Family, Community and Social Institutions

CURRICULUM CONTENT

This SHS 1 unit develops family, community and social relationships through social systems, institutions and development analysis. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving family, community and social relationships; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving family, community and social relationships, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 3: Population and Human Development

CURRICULUM CONTENT

This SHS 1 unit develops environment and natural resources through social systems, institutions and development analysis. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving environment and natural resources; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving environment and natural resources, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 4: Environment and Natural Resources

CURRICULUM CONTENT

This SHS 1 unit develops population, health and wellbeing through social systems, institutions and development analysis. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving population, health and wellbeing; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving population, health and wellbeing, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 5: Health, Nutrition and Wellbeing

CURRICULUM CONTENT

This SHS 1 unit develops economic activities and development through social systems, institutions and development analysis. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving economic activities and development; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving economic activities and development, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 6: Economic Activities and Development

CURRICULUM CONTENT

This SHS 1 unit develops governance and civic institutions through social systems, institutions and development analysis.

Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving governance and civic institutions; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving governance and civic institutions, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 7: Governance and Social Organisation

CURRICULUM CONTENT

This SHS 1 unit develops citizenship, rights and responsibilities through social systems, institutions and development analysis.

Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving citizenship, rights and responsibilities; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving citizenship, rights and responsibilities, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 8: Citizenship and National Values

CURRICULUM CONTENT

This SHS 1 unit develops technology, globalisation and society through social systems, institutions and development analysis. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving technology, globalisation and society; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving technology, globalisation and society, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 9: Technology and Social Change

CURRICULUM CONTENT

This SHS 1 unit develops national development challenges through social systems, institutions and development analysis. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving national development challenges; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving national development challenges, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 10: Social Research and Evidence

CURRICULUM CONTENT

This SHS 1 unit develops civic action and project work through social systems, institutions and development analysis. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving civic action and project work; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving civic action and project work, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing

Computing — Unit 1: Computer Systems and Architecture

CURRICULUM CONTENT

This SHS 1 unit develops digital devices and systems through systems thinking, programming and data modelling. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving digital devices and systems; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on digital devices and systems + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 2: Data Representation and Information

CURRICULUM CONTENT

This SHS 1 unit develops files, folders and digital organisation through systems thinking, programming and data modelling. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving files, folders and digital organisation; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on files, folders and digital organisation + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 3: Operating Systems and Software

CURRICULUM CONTENT

This SHS 1 unit develops word processing and digital documents through systems thinking, programming and data modelling. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving word processing and digital documents; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on word processing and digital documents + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 4: Algorithms and Computational Thinking

CURRICULUM CONTENT

This SHS 1 unit develops spreadsheets, formulas and data through systems thinking, programming and data modelling. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving spreadsheets, formulas and data; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on spreadsheets, formulas and data + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 5: Programming Fundamentals

CURRICULUM CONTENT

This SHS 1 unit develops presentations and multimedia through systems thinking, programming and data modelling. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving presentations and multimedia; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on presentations and multimedia + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 6: Databases and Structured Data

CURRICULUM CONTENT

This SHS 1 unit develops internet, networks and communication through systems thinking, programming and data modelling.

Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving internet, networks and communication; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on internet, networks and communication + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 7: Networks and Internet Systems

CURRICULUM CONTENT

This SHS 1 unit develops algorithms, programming and debugging through systems thinking, programming and data modelling. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving algorithms, programming and debugging; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on algorithms, programming and debugging + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 8: Web and Digital Communication

CURRICULUM CONTENT

This SHS 1 unit develops data, information and representation through systems thinking, programming and data modelling. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving data, information and representation; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on data, information and representation + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 9: Cybersecurity and Digital Ethics

CURRICULUM CONTENT

This SHS 1 unit develops cyber safety, privacy and security through systems thinking, programming and data modelling. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving cyber safety, privacy and security; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on cyber safety, privacy and security + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 10: Digital Projects and Documentation

CURRICULUM CONTENT

This SHS 1 unit develops ai, ethics and digital projects through systems thinking, programming and data modelling. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 1, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving ai, ethics and digital projects; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on ai, ethics and digital projects + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 1; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

SHS 2

Phase: Secondary Education

Mathematics

Mathematics — Unit 1: Real Number Properties and Advanced Algebra

CURRICULUM CONTENT

Analyse deeper real-number and index relationships and test assumptions.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for number and place value, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for number and place value: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 2: Functions and Graphs

CURRICULUM CONTENT

Combine numerical and algebraic transformations and evaluate alternative methods.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for operations, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for operations: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 3: Sequences and Series

CURRICULUM CONTENT

Use rational representations in complex mathematical applications.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for fractions and decimals, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for fractions and decimals: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 4: Coordinate Geometry and Transformations

CURRICULUM CONTENT

Analyse rates, proportional change and mathematical models.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for ratio, proportion and percentages, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for ratio, proportion and percentages: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 5: Trigonometric Relationships

CURRICULUM CONTENT

Solve and analyse algebraic structures, equations and patterns.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for algebra and patterns, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for algebra and patterns: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 6: Mensuration and Geometric Applications

CURRICULUM CONTENT

Apply measurement within geometric and algebraic models.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for measurement, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for measurement: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 7: Vectors and Mathematical Representation

CURRICULUM CONTENT

Construct and evaluate geometric arguments.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for geometry, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for geometry: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 8: Statistics, Variation and Data Analysis

CURRICULUM CONTENT

Critically analyse quantitative data and relationships.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for graphs and statistics, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for graphs and statistics: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 9: Probability Distributions and Reasoning

CURRICULUM CONTENT

Analyse probability models and assumptions.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for probability, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for probability: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 10: Mathematical Modelling and Problem Solving

CURRICULUM CONTENT

Evaluate alternative methods and justify efficient solutions.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for multi-step problem solving, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for multi-step problem solving: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language

English Language — Unit 1: Advanced Oral Presentation and Debate

CURRICULUM CONTENT

This SHS 2 unit develops vocabulary and word meaning through critical evaluation of evidence, rhetoric and authorial choices. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on vocabulary and word meaning; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on vocabulary and word meaning, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 2: Critical Listening and Evaluation

CURRICULUM CONTENT

This SHS 2 unit develops oral language and listening through critical evaluation of evidence, rhetoric and authorial choices. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on oral language and listening; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on oral language and listening, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 3: Close Reading and Textual Analysis

CURRICULUM CONTENT

This SHS 2 unit develops reading comprehension through critical evaluation of evidence, rhetoric and authorial choices. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on reading comprehension; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on reading comprehension, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 4: Inference, Synthesis and Summary

CURRICULUM CONTENT

This SHS 2 unit develops main ideas, inference and evidence through critical evaluation of evidence, rhetoric and authorial choices. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on main ideas, inference and evidence; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on main ideas, inference and evidence, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 5: Advanced Grammar and Stylistics

CURRICULUM CONTENT

This SHS 2 unit develops grammar and usage through critical evaluation of evidence, rhetoric and authorial choices. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on grammar and usage; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on grammar and usage, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 6: Academic Vocabulary and Language Use

CURRICULUM CONTENT

This SHS 2 unit develops tense and agreement through critical evaluation of evidence, rhetoric and authorial choices. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on tense and agreement; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on tense and agreement, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 7: Research-based Writing and Referencing

CURRICULUM CONTENT

This SHS 2 unit develops sentence and paragraph structure through critical evaluation of evidence, rhetoric and authorial choices. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on sentence and paragraph structure; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on sentence and paragraph structure, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 8: Argument, Persuasion and Evidence

CURRICULUM CONTENT

This SHS 2 unit develops writing and composition through critical evaluation of evidence, rhetoric and authorial choices. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on writing and composition; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on writing and composition, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 9: Formal Reports and Professional Communication

CURRICULUM CONTENT

This SHS 2 unit develops reports, letters and formal communication through critical evaluation of evidence, rhetoric and authorial choices. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on reports, letters and formal communication; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on reports, letters and formal communication, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 10: Literature: Genre, Theme, Character and Technique

CURRICULUM CONTENT

This SHS 2 unit develops critical reading, editing and revision through critical evaluation of evidence, rhetoric and authorial choices. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on critical reading, editing and revision; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on critical reading, editing and revision, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science

Science — Unit 1: Atomic Structure and Periodicity

CURRICULUM CONTENT

This SHS 2 unit develops living things and classification through analysis and evaluation of complex evidence and systems. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving living things and classification; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for living things and classification.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 2: Chemical Reactions and Quantitative Relationships

CURRICULUM CONTENT

This SHS 2 unit develops matter and materials through analysis and evaluation of complex evidence and systems. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving matter and materials; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for matter and materials.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 3: Energy, Heat and Thermodynamics

CURRICULUM CONTENT

This SHS 2 unit develops human health and nutrition through analysis and evaluation of complex evidence and systems. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving human health and nutrition; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for human health and nutrition.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 4: Mechanics, Momentum and Circular Motion

CURRICULUM CONTENT

This SHS 2 unit develops plants, animals and life processes through analysis and evaluation of complex evidence and systems. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving plants, animals and life processes; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for plants, animals and life processes.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 5: Waves, Optics and Electromagnetic Applications

CURRICULUM CONTENT

This SHS 2 unit develops energy and energy transfer through analysis and evaluation of complex evidence and systems. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving energy and energy transfer; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for energy and energy transfer.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 6: Electricity, Magnetism and Electronics

CURRICULUM CONTENT

This SHS 2 unit develops forces, motion and measurement through analysis and evaluation of complex evidence and systems. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving forces, motion and measurement; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for forces, motion and measurement.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 7: Earth Systems, Climate and Resources

CURRICULUM CONTENT

This SHS 2 unit develops electricity, circuits and technology through analysis and evaluation of complex evidence and systems. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving electricity, circuits and technology; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for electricity, circuits and technology.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 8: Genetics, Reproduction and Evolution

CURRICULUM CONTENT

This SHS 2 unit develops earth, environment and resources through analysis and evaluation of complex evidence and systems. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving earth, environment and resources; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for earth, environment and resources.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 9: Ecology and Population Systems

CURRICULUM CONTENT

This SHS 2 unit develops scientific investigation and evidence through analysis and evaluation of complex evidence and systems. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving scientific investigation and evidence; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for scientific investigation and evidence.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 10: Experimental Design, Data and Scientific Reasoning

CURRICULUM CONTENT

This SHS 2 unit develops sustainability and responsible resource use through analysis and evaluation of complex evidence and systems. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving sustainability and responsible resource use; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for sustainability and responsible resource use.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies

Social Studies — Unit 1: Culture, Diversity and Social Cohesion

CURRICULUM CONTENT

This SHS 2 unit develops identity, culture and socialisation through policy, economic/social issues and critical evaluation.

Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving identity, culture and socialisation; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving identity, culture and socialisation, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 2: Social Stratification and Mobility

CURRICULUM CONTENT

This SHS 2 unit develops family, community and social relationships through policy, economic/social issues and critical evaluation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving family, community and social relationships; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving family, community and social relationships, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 3: Population, Migration and Development

CURRICULUM CONTENT

This SHS 2 unit develops environment and natural resources through policy, economic/social issues and critical evaluation.

Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving environment and natural resources; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving environment and natural resources, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 4: Environmental Sustainability and Resource Management

CURRICULUM CONTENT

This SHS 2 unit develops population, health and wellbeing through policy, economic/social issues and critical evaluation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving population, health and wellbeing; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving population, health and wellbeing, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 5: Public Health and Social Wellbeing

CURRICULUM CONTENT

This SHS 2 unit develops economic activities and development through policy, economic/social issues and critical evaluation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving economic activities and development; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving economic activities and development, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 6: Economic Systems and Development

CURRICULUM CONTENT

This SHS 2 unit develops governance and civic institutions through policy, economic/social issues and critical evaluation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving governance and civic institutions; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving governance and civic institutions, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 7: Governance, Democracy and Accountability

CURRICULUM CONTENT

This SHS 2 unit develops citizenship, rights and responsibilities through policy, economic/social issues and critical evaluation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving citizenship, rights and responsibilities; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving citizenship, rights and responsibilities, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 8: Rights, Responsibilities and Civic Participation

CURRICULUM CONTENT

This SHS 2 unit develops technology, globalisation and society through policy, economic/social issues and critical evaluation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving technology, globalisation and society; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving technology, globalisation and society, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 9: Globalisation and Technology

CURRICULUM CONTENT

This SHS 2 unit develops national development challenges through policy, economic/social issues and critical evaluation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving national development challenges; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving national development challenges, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 10: Social Problems, Policy and Community Response

CURRICULUM CONTENT

This SHS 2 unit develops civic action and project work through policy, economic/social issues and critical evaluation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving civic action and project work; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving civic action and project work, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing

Computing — Unit 1: Advanced Computer Architecture

CURRICULUM CONTENT

This SHS 2 unit develops digital devices and systems through algorithm analysis, software/data projects and responsible technology evaluation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving digital devices and systems; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on digital devices and systems + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 2: Data Structures and Representation

CURRICULUM CONTENT

This SHS 2 unit develops files, folders and digital organisation through algorithm analysis, software/data projects and responsible technology evaluation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on files, folders and digital organisation + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 3: Programming with Modular Design

CURRICULUM CONTENT

This SHS 2 unit develops word processing and digital documents through algorithm analysis, software/data projects and responsible technology evaluation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving word processing and digital documents; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on word processing and digital documents + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 4: Algorithms, Testing and Complexity

CURRICULUM CONTENT

This SHS 2 unit develops spreadsheets, formulas and data through algorithm analysis, software/data projects and responsible technology evaluation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving spreadsheets, formulas and data; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on spreadsheets, formulas and data + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 5: Databases and Data Management

CURRICULUM CONTENT

This SHS 2 unit develops presentations and multimedia through algorithm analysis, software/data projects and responsible technology evaluation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving presentations and multimedia; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on presentations and multimedia + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 6: Networking and Internet Protocols

CURRICULUM CONTENT

This SHS 2 unit develops internet, networks and communication through algorithm analysis, software/data projects and

responsible technology evaluation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving internet, networks and communication; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on internet, networks and communication + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 7: Web Technologies and Digital Media

CURRICULUM CONTENT

This SHS 2 unit develops algorithms, programming and debugging through algorithm analysis, software/data projects and responsible technology evaluation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving algorithms, programming and debugging; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on algorithms, programming and debugging + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 8: Cybersecurity, Privacy and Risk

CURRICULUM CONTENT

This SHS 2 unit develops data, information and representation through algorithm analysis, software/data projects and responsible technology evaluation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving data, information and representation; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on data, information and representation + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 9: Systems Analysis and Design

CURRICULUM CONTENT

This SHS 2 unit develops cyber safety, privacy and security through algorithm analysis, software/data projects and responsible technology evaluation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving cyber safety, privacy and security; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on cyber safety, privacy and security + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 10: Applied Computing Project

CURRICULUM CONTENT

This SHS 2 unit develops ai, ethics and digital projects through algorithm analysis, software/data projects and responsible technology evaluation. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 2, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving ai, ethics and digital projects; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on ai, ethics and digital projects + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 2; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

SHS 3

Phase: Secondary Education

Mathematics

Mathematics — Unit 1: Integrated Number and Algebraic Reasoning

CURRICULUM CONTENT

Synthesise real-number knowledge for proof, modelling, examination and further-study applications.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for number and place value, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for number and place value: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 2: Functions, Equations and Inequalities

CURRICULUM CONTENT

Integrate numerical and algebraic operations in unfamiliar problems.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for operations, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for operations: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 3: Sequences, Series and Mathematical Modelling

CURRICULUM CONTENT

Synthesise rational-number concepts in advanced applications.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for fractions and decimals, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for fractions and decimals: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 4: Coordinate and Analytical Geometry

CURRICULUM CONTENT

Model and evaluate proportional relationships.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for ratio, proportion and percentages, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for ratio, proportion and percentages: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 5: Trigonometry and Geometric Proof

CURRICULUM CONTENT

Generalise, prove and solve complex algebraic relationships.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for algebra and patterns, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for algebra and patterns: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 6: Mensuration and Applied Measurement

CURRICULUM CONTENT

Integrate measurement with geometric and algebraic models.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for measurement, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for measurement: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 7: Vectors and Transformations

CURRICULUM CONTENT

Produce logically structured geometric arguments.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for geometry, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for geometry: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 8: Statistics and Interpretation of Data

CURRICULUM CONTENT

Evaluate data, models and statistical claims.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for graphs and statistics, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for graphs and statistics: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 9: Probability and Risk

CURRICULUM CONTENT

Analyse probability models and communicate assumptions.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for probability, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for probability: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Mathematics — Unit 10: Integrated Examination and Further-study Applications

CURRICULUM CONTENT

Synthesise strands for examination and further-study readiness.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a concrete Ghanaian context for multi-step problem solving, model the representation and reasoning step by step, then change one condition and require learners to explain how the solution changes.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Four-part assessment for multi-step problem solving: direct item, changed-condition item, Ghanaian contextual problem and unfamiliar transfer item. Require working and checking.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language

English Language — Unit 1: Advanced Speaking, Presentation and Interview Skills

CURRICULUM CONTENT

This SHS 3 unit develops vocabulary and word meaning through independent interpretation, synthesis and further-study communication. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on vocabulary and word meaning; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on vocabulary and word meaning, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 2: Critical Listening and Evaluation of Spoken Texts

CURRICULUM CONTENT

This SHS 3 unit develops oral language and listening through independent interpretation, synthesis and further-study communication. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on oral language and listening; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on oral language and listening, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 3: Unseen Reading and Critical Analysis

CURRICULUM CONTENT

This SHS 3 unit develops reading comprehension through independent interpretation, synthesis and further-study communication. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on reading comprehension; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on reading comprehension, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 4: Synthesis, Evaluation and Evidence

CURRICULUM CONTENT

This SHS 3 unit develops main ideas, inference and evidence through independent interpretation, synthesis and further-study communication. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on main ideas, inference and evidence; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on main ideas, inference and evidence, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 5: Advanced Grammar and Editing

CURRICULUM CONTENT

This SHS 3 unit develops grammar and usage through independent interpretation, synthesis and further-study communication. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on grammar and usage; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on grammar and usage, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 6: Vocabulary, Register and Style

CURRICULUM CONTENT

This SHS 3 unit develops tense and agreement through independent interpretation, synthesis and further-study communication. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on tense and agreement; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on tense and agreement, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 7: Academic and Examination Writing

CURRICULUM CONTENT

This SHS 3 unit develops sentence and paragraph structure through independent interpretation, synthesis and further-study communication. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on sentence and paragraph structure; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on sentence and paragraph structure, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 8: Argumentative and Discursive Composition

CURRICULUM CONTENT

This SHS 3 unit develops writing and composition through independent interpretation, synthesis and further-study communication. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on writing and composition; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on writing and composition, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 9: Formal Communication and Research

Presentation

CURRICULUM CONTENT

This SHS 3 unit develops reports, letters and formal communication through independent interpretation, synthesis and further-study communication. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on reports, letters and formal communication; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on reports, letters and formal communication, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

English Language — Unit 10: Literature: Critical and Comparative

Interpretation

CURRICULUM CONTENT

This SHS 3 unit develops critical reading, editing and revision through independent interpretation, synthesis and further-study communication. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a grade-appropriate Ghanaian text or communication situation focused on critical reading, editing and revision; model one language/reading decision, require evidence, then have learners produce and revise an independent response.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Text or communication task on critical reading, editing and revision, followed by evidence-based response, independent production and editing/revision.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science

Science — Unit 1: Advanced Matter and Chemical Relationships

CURRICULUM CONTENT

This SHS 3 unit develops living things and classification through synthesis, modelling, evaluation and further-study readiness. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving living things and classification; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for living things and classification.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 2: Organic and Applied Chemistry Foundations

CURRICULUM CONTENT

This SHS 3 unit develops matter and materials through synthesis, modelling, evaluation and further-study readiness. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving matter and materials; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for matter and materials.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 3: Thermodynamics and Energy Transfer

CURRICULUM CONTENT

This SHS 3 unit develops human health and nutrition through synthesis, modelling, evaluation and further-study readiness. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving human health and nutrition; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for human health and nutrition.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 4: Mechanics, Fields and Applications

CURRICULUM CONTENT

This SHS 3 unit develops plants, animals and life processes through synthesis, modelling, evaluation and further-study readiness. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving plants, animals and life processes; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for plants, animals and life processes.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 5: Waves, Light and Modern Applications

CURRICULUM CONTENT

This SHS 3 unit develops energy and energy transfer through synthesis, modelling, evaluation and further-study readiness. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving energy and energy transfer; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for energy and energy transfer.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 6: Electricity, Electromagnetism and Technology

CURRICULUM CONTENT

This SHS 3 unit develops forces, motion and measurement through synthesis, modelling, evaluation and further-study readiness. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving forces, motion and measurement; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for forces, motion and measurement.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 7: Earth, Climate and Sustainable Resources

CURRICULUM CONTENT

This SHS 3 unit develops electricity, circuits and technology through synthesis, modelling, evaluation and further-study readiness. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving electricity, circuits and technology; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for electricity, circuits and technology.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 8: Genetics, Evolution and Human Biology

CURRICULUM CONTENT

This SHS 3 unit develops earth, environment and resources through synthesis, modelling, evaluation and further-study readiness. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving earth, environment and resources; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for earth, environment and resources.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 9: Ecology, Biodiversity and Conservation

CURRICULUM CONTENT

This SHS 3 unit develops scientific investigation and evidence through synthesis, modelling, evaluation and further-study readiness. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving scientific investigation and evidence; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for scientific investigation and evidence.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Science — Unit 10: Integrated Scientific Modelling and Examination Practice

CURRICULUM CONTENT

This SHS 3 unit develops sustainability and responsible resource use through synthesis, modelling, evaluation and further-study readiness. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Use a familiar Ghanaian observation or situation involving sustainability and responsible resource use; identify the scientific concept, examine evidence, explain the relationship and transfer the explanation to a new situation.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Concept explanation + observation/data interpretation + Ghanaian application + evidence-based conclusion for sustainability and responsible resource use.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies

Social Studies — Unit 1: Social Change, Identity and National Cohesion

CURRICULUM CONTENT

This SHS 3 unit develops identity, culture and socialisation through synthesis of national/global issues and further-study reasoning. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving identity, culture and socialisation; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving identity, culture and socialisation, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 2: Culture, Heritage and Globalisation

CURRICULUM CONTENT

This SHS 3 unit develops family, community and social relationships through synthesis of national/global issues and further-study reasoning. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving family, community and social relationships; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving family, community and social relationships, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 3: Population, Migration and Human Development

CURRICULUM CONTENT

This SHS 3 unit develops environment and natural resources through synthesis of national/global issues and further-study reasoning. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving environment and natural resources; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving environment and natural resources, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 4: Environmental Policy and Sustainability

CURRICULUM CONTENT

This SHS 3 unit develops population, health and wellbeing through synthesis of national/global issues and further-study reasoning. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving population, health and wellbeing; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving population, health and wellbeing, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 5: Health Inequality and Social Wellbeing

CURRICULUM CONTENT

This SHS 3 unit develops economic activities and development through synthesis of national/global issues and further-study reasoning. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving economic activities and development; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving economic activities and development, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 6: Economic Development and Entrepreneurship

CURRICULUM CONTENT

This SHS 3 unit develops governance and civic institutions through synthesis of national/global issues and further-study reasoning. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving governance and civic institutions; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving governance and civic institutions, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 7: Governance, Democracy, Justice and Accountability

CURRICULUM CONTENT

This SHS 3 unit develops citizenship, rights and responsibilities through synthesis of national/global issues and further-study reasoning. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving citizenship, rights and responsibilities; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving citizenship, rights and responsibilities, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 8: Citizenship, Rights and National Development

CURRICULUM CONTENT

This SHS 3 unit develops technology, globalisation and society through synthesis of national/global issues and further-study reasoning. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving technology, globalisation and society; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving technology, globalisation and society, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 9: Technology, Globalisation and Inequality

CURRICULUM CONTENT

This SHS 3 unit develops national development challenges through synthesis of national/global issues and further-study reasoning. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving national development challenges; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving national development challenges, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Social Studies — Unit 10: Research, Policy Analysis and Civic Action

CURRICULUM CONTENT

This SHS 3 unit develops civic action and project work through synthesis of national/global issues and further-study reasoning. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Analyse a Ghanaian community or national situation involving civic action and project work; identify stakeholders, evidence and consequences, then justify an appropriate response or action.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Analyse a Ghanaian social/civic situation involving civic action and project work, identify evidence and concepts, and justify a response or action.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing

Computing — Unit 1: Advanced Programming and Software Design

CURRICULUM CONTENT

This SHS 3 unit develops digital devices and systems through advanced problem solving, project evaluation and AI ethics. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving digital devices and systems; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on digital devices and systems + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 2: Algorithms and Problem Solving

CURRICULUM CONTENT

This SHS 3 unit develops files, folders and digital organisation through advanced problem solving, project evaluation and AI ethics. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving files, folders and digital organisation; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on files, folders and digital organisation + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 3: Data Structures and Database Applications

CURRICULUM CONTENT

This SHS 3 unit develops word processing and digital documents through advanced problem solving, project evaluation and AI ethics. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving word processing and digital documents; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on word processing and digital documents + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 4: Networks and Distributed Systems

CURRICULUM CONTENT

This SHS 3 unit develops spreadsheets, formulas and data through advanced problem solving, project evaluation and AI ethics. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving spreadsheets, formulas and data; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on spreadsheets, formulas and data + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 5: Web and Application Development

CURRICULUM CONTENT

This SHS 3 unit develops presentations and multimedia through advanced problem solving, project evaluation and AI ethics. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving presentations and multimedia; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on presentations and multimedia + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 6: Cybersecurity and Digital Forensics Concepts

CURRICULUM CONTENT

This SHS 3 unit develops internet, networks and communication through advanced problem solving, project evaluation and AI ethics. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving internet, networks and communication; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on internet, networks and communication + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 7: Artificial Intelligence and Machine Learning Concepts

CURRICULUM CONTENT

This SHS 3 unit develops algorithms, programming and debugging through advanced problem solving, project evaluation and AI ethics. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving algorithms, programming and debugging; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on algorithms, programming and debugging + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 8: Data Analytics and Visualisation

CURRICULUM CONTENT

This SHS 3 unit develops data, information and representation through advanced problem solving, project evaluation and AI ethics. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving data, information and representation; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on data, information and representation + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 9: Ethics, Law and Responsible Technology

CURRICULUM CONTENT

This SHS 3 unit develops cyber safety, privacy and security through advanced problem solving, project evaluation and AI ethics. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving cyber safety, privacy and security; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on cyber safety, privacy and security + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

Computing — Unit 10: Capstone Computing Project and Portfolio

CURRICULUM CONTENT

This SHS 3 unit develops ai, ethics and digital projects through advanced problem solving, project evaluation and AI ethics. Learners study the subject-specific concepts and vocabulary, work through a Ghanaian context, interpret or produce evidence, practise the skill with guidance, complete an independent task, and transfer the learning to a new situation. The knowledge and task demand are written for SHS 3, not copied from another grade.

KEY KNOWLEDGE / SKILLS

Learners identify the essential concepts and vocabulary; represent or explain the idea in an appropriate form; apply it in a Ghanaian context; compare or justify when required; and transfer the learning to an unfamiliar situation.

WORKED EXAMPLE

Complete a practical digital task involving ai, ethics and digital projects; test the result, diagnose an error or risk, correct it and explain the relevant safety, privacy, reliability or ethics consideration.

GUIDED PRACTICE

The tutor models the first example, makes the reasoning explicit, checks learner understanding, and then changes one condition for a second example. Learners explain the choice of method, evidence or design.

INDEPENDENT PRACTICE

1) Direct application. 2) Changed-condition application. 3) Unfamiliar transfer. The learner must show working, evidence, explanation, design trace or argument appropriate to the subject.

ASSESSMENT

Practical task on ai, ethics and digital projects + process explanation + test/debug step + responsible-use reflection.

MISCONCEPTION AND REMEDIATION

Identify the conceptual error, reteach the prerequisite using a different representation, model one corrected example and require a fresh task with changed values or wording.

EXTENSION / MASTERY

Transfer the concept to a new Ghanaian or real-world situation. Mastery requires accurate performance on more than one example and successful unfamiliar transfer.

GRADE-SPECIFICITY CHECK

This unit is written for SHS 3; the expected vocabulary, content depth, reasoning demand and application must not be copied unchanged into another grade.

OFFICIAL NaCCA MAPPING + SME

VERIFICATION REGISTER

The client specifically identified placeholder indicator codes as a release risk. This register therefore makes the verification step explicit. No code is invented. The curriculum SME must enter the exact current NaCCA wording and code from the official subject document, record the source version/page, and sign off.
